Protein Prenylation, Part B, 2011-11-08 This volume of The Enzymes features high caliber thematic articles on the topic of glycosylphosphatidylinositol GPI anchoring of proteins Contributions from leading authorities Informs and updates on all the latest developments in the field Fortschritte der Chemie Organischer Naturstoffe / Progress in the Chemistry of Organic Natural Products, 2012-12-06 The cyanogenic glycosides here defined as glycosidic derivatives of α -hydroxynitriles represent a rather limited class of natural products which are widely distributed in the plant kingdom and to a small extent even in animals A characteristic feature of these glycosides is their ability to release hydrocyanic acid on treatment with dilute acids or appropriate enzymes The term cyanogenic is used to designate this property regardless of whether pure substances plants or animals are serving as the source In the latter cases the term cyanophoric is occasionally employed synonymously Cyanogenesis in plants was probably first discovered by SCHRADER in 1803 working with bitter almonds In 1830 ROBIQUET and BOUTRON CHARLARD succeeded in isolating the parent glycoside namely amygdalin Over the years a total of 18 cyanogenic glycosides have been isolated and characterized more or less completely Table I p 76 It will be noted that the majority of these compounds has been isolated in the era of classical organic chemistry and that progress in discovering new compounds not to mention new structural types has been surprisingly slow It is worth remembering here that the mechanism of cyanogenesis has been established only in the minority of known cyanogenic species The cyanogenic glycosides have last been reviewed in 1958 by DILLE MANN 36 Since then no complete reviews in this field have appeared It is the purpose of the present article to survey the more recent advances and hopefully to stimulate continued interest in these interesting compounds *Advances in Mass Spectrometry, Volume 12* P.G. Kistemaker, N.M.M. Nibbering, 2012-12-02 These proceedings containing the texts of the invited lectures cover all aspects of mass spectrometry including theory fundamental studies applications and instrumentation Emphasis is placed on recent developments A complete listing of the posters is included Proceedings of the 25th International Conference on the Physics of Semiconductors Part I Norio MIURA, T. Ando, 2001-05-17 As the proceedings of the most important and prestigious conference in the field of semiconductor physics this book contains the latest information on the progress of semiconductor physics Almost 1000 contributed papers address the full range of current topics The special symposium deals with the interface between the fundamentals and device applications and tries to predict the developments in semiconductor physics semiconductor materials and device applications in the 21st century A wide range of contributions represent the forefront of academic and industrial research **Theoretical Models of Chemical Bonding** Zvonimir B. Maksic, 2012-12-06 The renowned theoretical physicist Victor F Weisskopf rightly pointed out that a real understanding of natural phenomena implies a clear distinction between the essential and the peripheral Only when we reach such an understanding that is to say when we are able to separate the relevant from the irrelevant will the phenomena no longer appear complex but intellectually transparent

This statement which is generally valid reflects the very essence of modelling in the quantum theory of matter on the molecular level in particular. Indeed without theoretical models one would be swamped by too many details embodied in intricate accurate molecular wavefunctions. Further physically justified simplifications enable studies of the otherwise intractable systems and or phenomena. Finally a lack of appropriate models would leave myriads of raw experimental data totally unrelated and incomprehensible. The present series of books dwells on the most important models of chemical bonding and on the variety of its manifestations. In this volume the electronic structure and properties of molecules are considered in depth. Particular attention is focused on the nature of intramolecular interactions which in turn are revealed by various types of molecular spectroscopy. Emphasis is put on the conceptual and interpretive aspects of the theory in line with the general philosophy adopted in the series.

Cumulated Index Medicus, 1974 [Biomaterial Control of Therapeutic Stem Cells](#) Akon Higuchi, 2019-02-18 Human pluripotent stem cells hPSCs which cover both human embryonic stem cells hESCs and induced pluripotent stem cells iPSCs show promise for drug discovery and regenerative medicine applications. These stem cells cannot be cultured on conventional tissue culture dishes but on biomaterials that have specific interactions with the hPSCs. Differentiation is regulated by the biological and physical cues conferred by the biomaterial. This book provides a systematic treatment of these topics bridging the gap between fundamental biomaterials research of stem cells and their use in clinical trials. The author looks at hPSC culture on a range of biomaterial substrates. Differentiation and control of hESCs and iPSCs into cardiomyocytes, osteoblasts, neural lineages and hepatocytes are covered. The author then considers their translation into stem cell therapies and looks at clinical trials across spinal cord injury, macular degeneration, bone disease and myocardial infarction. Finally a chapter on future directions closes the book. By using this book the reader will gain a robust overview of current research and a clearer understanding of the status of clinical trials for stem cell therapies.
