

Spinning Storms

by American Museum of Natural History

This article is provided courtesy of the American Museum of Natural History.

On a spring night in 2007, disaster struck a small town in Kansas called Greensburg. Shortly before 10 p.m., a siren went off. A mile-wide tornado was approaching Greensburg. Its winds were estimated to be more than 200 miles per hour. In less than ten minutes, the town was destroyed. Ten people lost their lives.

When the storm had passed, people climbed out from their storm cellars through the rubble. Cars and trucks had been thrown about. Homes were crushed, or simply ripped from the ground. "I'm in downtown Greensburg. There's really nothing left," said one resident.

The tornado destroyed much of the town. Many residents needed temporary housing.

geometric probabilities distributions examples - May 12 2023

web as seen above the geometric probability distribution is given by $p \times x^1 p \times x^1 p$ express $p \times x^x$ for $x = 1, 2, n$ to obtain $p \times x^1 p \times x^2 p \times x^3 p \times x^n$ we note that the above are the terms of a geometric sequence hence
