

Peppered Moths: Natural Selection in Black & White

Objective: Simulate changes in moth population due to pollution and predation, and observe how species can change over time.

Introduction: Charles Darwin accumulated a tremendous collection of facts to support the theory of evolution by natural selection. One of his difficulties in demonstrating the theory, however, was the lack of an example of evolution over a short period of time, which could be observed as it was taking place in nature. Although Darwin was unaware of it, remarkable examples of evolution, which might have helped to persuade people of his theory, were in the countryside of his native England. One such example is the evolution of the peppered moth *Biston betularia*.

The economic changes known as the industrial revolution began in the middle of the eighteenth century. Since then, tons of soot have been deposited on the country side around industrial areas. The soot discoloured and generally darkened the surfaces of trees and rocks. In 1848, a dark-coloured moth was first recorded. Today, in some areas, 90% or more of the peppered moths are dark in colour. More than 70 species of moth in England have undergone a change from light to dark. Similar observations have been made in other industrial nations, including the United States.

Instructions:

Go to the link below to read more information on Kettlewell's study of moths. At the end, you will run two simulations for 5 minutes each, during this time you will play the part of a bluejay that eats moths.

After 5 minutes record the % of dark moths and light moths you will need this information later.

Evolution Christopher H. K. Persaud,2007-12 Darwinian evolution is taught unreservedly to students of science around the world as incontrovertible truth even though many aspects of the theory have been thoroughly discredited while others are woefully lacking in corroboration from a standpoint of proper scientific precept and practice Practical and honest scientists increasingly are acknowledging that evolutionism is biologically and mathematically impossible The outlandish premise is at odds with the laws of physics and manifestly incompatible with genuine geological and paleontological criteria for aging and classifying rocks strata and fossils Evolutionary theory s ostracism of God as a supreme designer and creator of

the universe and of life has emboldened many of history's most ruthless dictators who have embraced its disturbing message to commit crimes of unspeakable evil. Many millions of people have lost their lives as demagogues fueled by evolutionist inclinations have sought to legitimize sinister proclivities such as racism, bigotry, eugenics, and ethnic cleansing among other perpetrations of antipathy and wickedness. It is not unreasonable to assume that many of today's social and behavioral thinkers as well as misguided scientists who support evolutionary theory also nurture predilections that are far removed from wholesome deportment and espouse leanings that show scant respect for the sanctity of human life. Evolutionary thought falls outside the precincts of essential moral contemplation and is beyond the realm of real science.
