

As part of my health promotional plan, I aim to devote a minimum of 210 minutes to physical activities per week. I am usually quite busy with my work and studies; thus, it was decided to divide that time equally between five to seven days of the week so that my training lasts 30-45 minutes. Such a positive effect of physical activity has already received substantial scientific support. As such, Phillips et al. (2018) assert that exercising is positively associated with the prevention and control of heart disease, cancer, and diabetes, to name a few. Additionally, I expect to lose some weight and have a fitter body. Finally, through physical activity, I want to achieve a healthier state of mind.

Nevertheless, some external and internal factors can negatively affect my efforts to start a more active life. As for the former, my previous attempts to
