Physical Sciences Paper Memorandum November 23:

Federal Register, 2000-07-07 **How the Hippies Saved Physics: Science, Counterculture, and the Quantum**

Revival David Kaiser, 2011-06-27 How the Hippies Saved Physics gives us an unconventional view of some unconventional people engaged early in the fundamentals of quantum theory Great fun to read Anton Zeilinger Nobel laureate in physics The surprising story of eccentric young scientists among them Nobel laureates John Clauser and Alain Aspect who stood up to convention and changed the face of modern physics Today quantum information theory is among the most exciting scientific frontiers attracting billions of dollars in funding and thousands of talented researchers But as MIT physicist and historian David Kaiser reveals this cutting edge field has a surprisingly psychedelic past How the Hippies Saved Physics introduces us to a band of freewheeling physicists who defied the imperative to shut up and calculate and helped to rejuvenate modern physics For physicists the 1970s were a time of stagnation Jobs became scarce and conformity was encouraged sometimes stifling exploration of the mysteries of the physical world Dissatisfied underemployed and eternally curious an eccentric group of physicists in Berkeley California banded together to throw off the constraints of the physics mainstream and explore the wilder side of science Dubbing themselves the Fundamental Fysiks Group they pursued an audacious speculative approach to physics They studied quantum entanglement and Bell's Theorem through the lens of Eastern mysticism and psychic mind reading discussing the latest research while lounging in hot tubs Some even dabbled with LSD to enhance their creativity Unlikely as it may seem these iconoclasts spun modern physics in a new direction forcing mainstream physicists to pay attention to the strange but exciting underpinnings of quantum theory A lively entertaining story that illuminates the relationship between creativity and scientific progress How the Hippies Saved Physics takes us to a time when only the unlikeliest heroes could break the science world out of its rut Theoretical Physics In Your Face: Selected Correspondence

Of Sidney Coleman Aaron Sidney Wright, Diana Coleman, David Kaiser, 2022-08-18 Sidney Coleman 1937 2007 was a renowned theoretical physicist who taught for more than forty years at Harvard University He contributed critical work on quantum field theory high energy particle physics and cosmology He was also a remarkably effective teacher who introduced generations of physicists to quantum field theory mentoring several leading members in the field His sense of humor and wit became legendary This selection of his previously unpublished correspondence illuminates changes in theoretical physics and in academic life over the course of Coleman's illustrious career The letters show the depth of Coleman's activities and interests including science fiction space travel and the US counter culture The volume also includes Coleman's legendary lecture Quantum Mechanics in Your Face *Federal Energy Guidelines* United States. Department of Energy, 2000

Nuclear Power National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Energy Engineering Board, Committee on Future Nuclear Power Development, 1992-02-01 The construction of nuclear power plants in the United States is stopping as regulators reactor manufacturers and operators sort

out a host of technical and institutional problems This volume summarizes the status of nuclear power analyzes the obstacles to resumption of construction of nuclear plants and describes and evaluates the technological alternatives for safer more economical reactors Topics covered include Institutional issues including regulatory practices at the federal and state levels the growing trends toward greater competition in the generation of electricity and nuclear and nonnuclear generation options Critical evaluation of advanced reactors covering attributes such as cost construction time safety development status and fuel cycles Finally three alternative federal research and development programs are presented

Unclear Physics Målfrid Braut-Hegghammer, 2016-08 Many authoritarian leaders want nuclear weapons but few manage to acquire them Autocrats seeking nuclear weapons fail in different ways and to varying degrees Iraq almost managed it Libya did not come close In *Unclear Physics* M lfrid Braut Hegghammer compares the two failed nuclear weapons programs showing that state capacity played a crucial role in the trajectory and outcomes of both projects Braut Hegghammer draws on a rich set of new primary sources collected during years of research in archives fieldwork across the Middle East and interviews with scientists and decision makers from both states She gained access to documents and individuals that no other researcher has been able to consult Her book tells the story of the Iraqi and Libyan programs from their origins in the late 1950s and 1960s until their dismantling This book reveals contemporary perspectives from scientists and regime officials on the opportunities and challenges facing each project Many of the findings challenge the conventional wisdom about clandestine weapons programs in closed authoritarian states and their prospects of success or failure Braut Hegghammer suggests that scholars and analysts ought to pay closer attention to how state capacity affects nuclear weapons programs in other authoritarian regimes both in terms of questioning the actual control these leaders have over their nuclear weapons programs and the capability of their scientists to solve complex technical challenges

Science, Cold War and the American State Allan A. Needell, 2013-02-01 This book illuminates how Berkner became a model that produced the scientist advisor policymaker that helped build post war America It does so by providing a detailed account of the personal and professional beliefs of one of the most influential figures in the American scientific community a figure that helped define the political and social climates that existed in the United States during the Cold War

Giant Telescopes W. Patrick McCray, 2006-04-30 Every night astronomers use a new generation of giant telescopes at observatories around the world to study phenomena at the forefront of science By focusing on the history of the Gemini Observatory twin 8 meter telescopes located on mountain peaks in Hawaii and Chile *Giant Telescopes* tells the story behind the planning and construction of modern scientific tools offering a detailed view of the technological and political transformation of astronomy in the postwar era Drawing on interviews with participants and archival documents W Patrick McCray describes the ambitions and machinations of prominent astronomers engineers funding patrons and politicians in their effort to construct a modern facility for cutting edge science and to establish a model for international cooperation in the coming era of

megascience His account details the technological institutional cultural and financial challenges that scientists faced while planning and building a new generation of giant telescopes Besides exploring how and why scientists embraced the promise and potential of new technologies he considers how these new tools affected what it means to be an astronomer McCray's book should interest anyone who desires a deeper understanding of the science technology and politics behind finding our place in the universe

The Age of Hiroshima Michael D. Gordin, G. John Ikenberry, 2020-01-14 A multifaceted portrait of the Hiroshima bombing and its many legacies On August 6 1945 in the waning days of World War II the United States dropped an atomic bomb on the Japanese city of Hiroshima The city's destruction stands as a powerful symbol of nuclear annihilation but it has also shaped how we think about war and peace the past and the present and science and ethics *The Age of Hiroshima* traces these complex legacies exploring how the meanings of Hiroshima have reverberated across the decades and around the world Michael D Gordin and G John Ikenberry bring together leading scholars from disciplines ranging from international relations and political theory to cultural history and science and technology studies who together provide new perspectives on Hiroshima as both a historical event and a cultural phenomenon As an event Hiroshima emerges in the flow of decisions and hard choices surrounding the bombing and its aftermath As a phenomenon it marked a revolution in science politics and the human imagination the end of one age and the dawn of another *The Age of Hiroshima* reveals how the bombing of Hiroshima gave rise to new conceptions of our world and its precarious interconnectedness and how we continue to live in its dangerous shadow today

American Men of Science ,1949 **California Earthquakes** Carl-Henry Geschwind, 2003-04-30 Winner of the Book Prize of the Forum for the History of Science in America from the History of Science Society In 1906 after an earthquake wiped out much of San Francisco leading California officials and scientists described the disaster as a one time occurrence and assured the public that it had nothing to worry about *California Earthquakes* explains how over time this attitude changed and Californians came to accept earthquakes as a significant threat as well as to understand how science and technology could reduce this threat Carl Henry Geschwind tells the story of the small group of scientists and engineers who in tension with real estate speculators and other pro growth forces private and public developed the scientific and political infrastructure necessary to implement greater earthquake awareness Through their political connections these reformers succeeded in building a state apparatus in which regulators could work together with scientists and engineers to reduce earthquake hazards Geschwind details the conflicts among scientists and engineers about how best to reduce these

risks and he outlines the dramatic twentieth century advances in our understanding of earthquakes their causes and how we can try to prepare for them Tracing the history of seismology and the rise of the regulatory state and of environmental awareness California Earthquakes tells how earthquake hazard management came about why some groups assisted and others fought it and how scientists and engineers helped shape it *The Publishers' Circular and Booksellers' Record* ,1924

The Electrician ,1884 Edward Condon's Cooperative Vision Thomas C. Lassman,2018-09-19 Born in 1902 Edward Condon made significant contributions to quantum theoretical physics Nearly ten years at Princeton University sealed his reputation as a leading figure in the field Then in 1937 he gave it all up to pursue an industrial career first at the Westinghouse Electric and Manufacturing Company and then by way of the federal government the National Bureau of Standards In a radical departure from professional norms Condon sought to redefine the relationship between academic science and technological innovation in industry He envisioned intimate cooperation with the universities to serve the needs of his employers and also the broader business community This book explores the birth life and death of that vision during the Great Depression World War II and the early Cold War Condon s cooperative model of R D evolved over time and by consequence laid bare sharp disagreements among academic corporate and government stakeholders about the practical value of new knowledge where and how it should be produced and ultimately on whose behalf it ought to be put to use
