2019 Science Mission Directorate Science Plan National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the NASA Science Mission Directorate Science Plan, 2019-12-23 NASA's Science Mission Directorate SMD ties together diverse researchers, sponsors, and resources to develop the science community's understanding of the universe. Within scientific organizations like NASA, it is important to establish clear strategies and goals to guide research and foster new discoveries across varying missions. SMD created a draft for their 2019 Science Plan, and a review of this draft is necessary to ensure that the plan establishes clear, attainable, relevant, and ambitious goals. Review of the Draft 2019 Science Mission Directorate Science Plan provides comments and recommendations for SMD's draft. Comments in this report focus on the level of ambition of the specified strategies in light of current and emerging opportunities to advance Earth and space science over the next 5 years, the ability of SMD to meet the science objectives in the most recent decadal surveys through implementation of specified strategies, additional strategies for SMD's considerations, and the general readability and clarity of the draft. Recommendations in this report identify important improvements for the 2019 Science Plan. Source or Sink? Erosional and Depositional Signatures of Tectonic Activity in Deep-Sea Sedimentary Systems Rob Butler, Fabiano Gamberi, Rosanna Maniscalco, Adam McArthur, 2022-11-10 *From Source to Seep* M. Lawson, M.J. Formolo, J.M. Eiler, 2018-03-28 Hydrocarbon systems by nature are a complex interplay of elements that must be spatially and temporally aligned to result in the generation and preservation of subsurface hydrocarbon accumulations. To meet the increasing challenges of discovering hydrocarbon resources, it is essential that we advance our understanding of these systems through new geochemical approaches and analytical developments. Such development requires that academic and industry-led research efforts converge in ways that are unique to the geosciences. The aim of this volume is to bring together a multidisciplinary geochemical community from industry and academia working in hydrocarbon systems to publish recent advances and state-of-the-art approaches to resolve the many remaining questions in hydrocarbon systems analysis. *From Source to Seep* presents geochemical and isotopic studies that are grouped into three themes: 1) source rock identification and the temperature/timing of hydrocarbon generation; 2) mechanisms and time scales associated with hydrocarbon migration, trapping, storage, and alteration; and 3) the impact of fluid flow on reservoir properties.

Cretaceous Climate Events and Short-Term Sea-Level Changes M. Waple, M.B. Hart, B. Sames, I.O. Yilmaz, 2020 Sea level constitutes a critical planetary boundary for geological processes and human life. Sea level fluctuations during major greenhouse phases are still enigmatic and strongly discussed in terms of changing climate systems. The geological record of the Cretaceous greenhouse period provides a deep time view on greenhouse phase Earth system processes that facilitates a much better understanding of the causes and consequences of global geologically short-term sea level changes. In particular, Cretaceous hothouse periods can serve as a laboratory to better understand a near future greenhouse Earth. This volume presents high-resolution sea level records from globally distributed sedimentary archives of the Cretaceous involving

a large group of scientists from the International Geoscience Programme IGCP 609 Marine to non marine sedimentary successions were analysed for revised age constraints the correlation of global palaeoclimate shifts and sea level changes tested for climate driven cyclicities and correlated within a high resolution stratigraphic framework of the Geological Timescale For hothouse periods the hypothesis of significant global groundwater related sea level change i e aquifer eustasy as a major process is reviewed and substantiated

The Anthropic Principle: A Universe Built for Man Anthony Walsh,2023-01-10 The Copernican Principle states that humankind is an insignificant assemblage of chemical scum living on an accidental planet in a suburb of a purposeless universe Many prominent scientists including Nobel laureate physicists have questioned this scurrilous principle which has led physicists to propose the Anthropic Principle This principle posits a purposeful link between the structure of the universe and the existence of humankind and its specialness The numerous features of the universe are so freakishly fine tuned for the existence of intelligent life that physicists are beginning to come to grips with the notion that our universe is profoundly purposeful and that there is a powerful and incredibly intelligent Mind behind it all
