## (Chapter 4) (Laws of Motion) (Exercises) (Class 11)

### Question 4.1:

Give the magnitude and direction of the net force acting on

- (a) a drop of rain falling down with a constant speed,
- (b) a cork of mass 10 g floating on water,
- (c) a kite skillfully held stationary in the sky,
- (d) a car moving with a constant velocity of 30 km/h on a rough road,
- (e) a high-speed electron in space far from all material objects, and free of electric and magnetic fields.

### Answer 4.1:

- (a) Zero net force  
The rain drop is falling with a constant speed.  
Hence, its acceleration is zero. As per Newton's second law of motion, the net force acting on the rain drop is zero.
- (b) Zero net force  
The weight of the cork is acting downward. It is balanced by the buoyant force exerted by the water in the upward direction.  
Hence, no net force is acting on the floating cork.
- (c) Zero net force  
The kite is stationary in the sky, i.e., it is not moving at all.  
Hence, as per Newton's first law of motion, no net force is acting on the kite.
- (d) Zero net force  
The car is moving on a rough road with a constant velocity.  
Hence, its acceleration is zero. As per Newton's second law of motion, no net force is acting on the car.
- (e) Zero net force  
The high speed electron is free from the influence of all fields.  
Hence, no net force is acting on the electron.

### Question 4.2:

A pebble of mass 0.05 kg is thrown vertically upwards. Give the direction and magnitude of the net force on the pebble.

- (a) during its upward motion,
- (b) during its downward motion,
- (c) at the highest point where it is momentarily at rest. Do your answers change if the pebble was thrown at an angle of  $45^\circ$  with the horizontal direction?  
Ignore air resistance.

### Answer 4.2:

0.5 N, in vertically downward direction, in all cases.

Acceleration due to gravity, irrespective of the direction of motion of an object, always acts downward. The gravitational force is the only force that acts on the pebble in all three cases. Its magnitude is given by Newton's second law of motion as:  $F = m \times a$

Where,  $F$  = net force and  $m$  = Mass of the pebble = 0.05 kg

$$a = g = 10 \text{ m/s}^2$$

$$\therefore F = 0.05 \times 10 = 0.5 \text{ N}$$

The net force on the pebble in all three cases is 0.5 N and this force acts in the downward direction.

If the pebble is thrown at an angle of  $45^\circ$  with the horizontal, it will have both the horizontal and vertical components of velocity. At the highest point, only the vertical component of velocity becomes zero. However, the pebble will have the horizontal component of velocity throughout its motion. This component of velocity produces no effect on the net force acting on the pebble.

*Computer Science and Educational Software Design* Pierre Tchounikine,2011-06-27 Developing educational software requires thinking problematizing representing modeling implementing and analyzing pedagogical objectives and issues as well as conceptual models and software architectures Computer scientists face the difficulty of understanding the particular issues and phenomena to be taken into account in educational software projects and of avoiding a naive technocentered perspective On the other hand actors with backgrounds in human or social sciences face the difficulty of understanding software design and implementation issues and how computer scientists engage in these tasks Tchounikine argues that these difficulties cannot be solved by building a kind of general theory or general engineering methodology to be adopted by all actors for all projects educational software projects may correspond to very different realities and may be conducted within very different perspectives and with very different matters of concern Thus the issue of understanding each others perspectives and elaborating some common ground is to be considered in context within the considered project or perspective To this end he provides the reader with a framework and means for actively taking into account the relationships between pedagogical settings and software and for working together in a multidisciplinary way to develop educational software His book is for actors engaged in research or development projects which require inventing designing adapting implementing or analyzing educational software The core audience is Master s and PhD students researchers and engineers from computer science or human and social sciences e g education psychology pedagogy philosophy communications or sociology interested in the issues raised by educational software design
