Education for Wicked Problems and the Reconciliation of Opposites Raoul J. Adam, 2016-02-26 The recognition and reconciliation of opposites lies at the heart of our most personal and global problems and is arguably one of the most neglected developmental tasks of Western education Such problems are wicked in the sense that they involve real life decisions that have to be made in rapidly changing contexts involving irreducible tensions and paradoxes By exploring our human tendency to bifurcate the universe Education for Wicked Problems the Reconciliation of Opposites proposes a way to recognise and re solve some of our most wicked problems Applying an original theory of bi relational development to wicked problems Adam proposes that our everyday ways of knowing and being can be powerfully located and understood in terms of the creation emergence opposition convergence

collapse and trans position of dyadic constituents such as nature culture conservative liberal and spirit matter He uses this approach to frame key debates in and across domains of knowledge and to offer new perspectives on three of the most profound and related problems of the twenty first century globalisation sustainability and secularisation This book is a comprehensive study of dyads and dyadic relationships and provides a multidisciplinary and original approach to human development in the face of wicked problems It will be of great interest to students and academics in education and psychosocial development as well as professionals across a range of fields looking for new ways to recognise and re solve the wicked problems that characterise their professions

Introducing Contemporary Psychodynamic Counselling and Psychotherapy: the Art and Science of the Unconscious Alistair Ross, 2019-06-07 Dr Alistair Ross is a University of Oxford academic whose previous work has been described by Ruby Wax as very very smart This new introductory book strikes an easy balance between theory and practice It takes the reader from the field s Freudian roots to its contemporary applications skills and insights Over the last 30 years important new theoretical ideas skills and clinical practices have emerged in counselling and psychotherapy While key Freudian concepts like transference counter transference and the influence of the past on the present remain vital to psychodynamic work research drawn from infant development neuroscience the role of the sacred and intersubjective approaches to relationships has changed the way therapists understand and work with clients Either in its own right or as part of an integrative approach psychodynamic counselling and psychotherapy have an important role to play in developments to come The book s features include A re discovery of the importance and relevance of Freud for present day therapeutic relationships An encounter with the breadth and depth of our understanding about and experience of the unconscious An introduction to research that has evolved after Freud revealing new ways of applying his ideas A contemporary perspective on traditional counselling and psychotherapy skills illustrated by vignettes and personal insights from Alistair Ross s professional practice An encouragement to develop new skills for relating at depth with our clients past present and future motivated by revealing how life changing therapy can be This book is a must read for trainee and practising psychodynamic or integrative therapists who want an overview of new thinking and practice or might benefit from greater insight into psychodynamic practice applying Freud s theoretical world to improving the lives of real people today It is good to see Alistair a valued student of mine and now an equally valued colleague taking up the torch for psychodynamic counselling and psychotherapy for a new generation He has written a book that collates much of the valuable writing to date and at the same time adds new dimensions that should not be overlooked Michael Jacobs Visiting Professor University of Leeds and Bournemouth University UK

Algorithmic and Experimental Methods in Algebra, Geometry, and Number Theory Gebhard Böckle, Wolfram Decker, Gunter Malle, 2018-03-22 This book presents state of the art research and survey articles that highlight work done within the Priority Program SPP 1489 Algorithmic and Experimental Methods in Algebra Geometry and Number Theory which was established and generously supported by the German Research Foundation DFG

from 2010 to 2016 The goal of the program was to substantially advance algorithmic and experimental methods in the aforementioned disciplines to combine the different methods where necessary and to apply them to central questions in theory and practice Of particular concern was the further development of freely available open source computer algebra systems and their interaction in order to create powerful new computational tools that transcend the boundaries of the individual disciplines involved The book covers a broad range of topics addressing the design and theoretical foundations implementation and the successful application of algebraic algorithms in order to solve mathematical research problems It offers a valuable resource for all researchers from graduate students through established experts who are interested in the computational aspects of algebra geometry and or number theory Sustainable Development of Business 4.0 Elena G. Popkova, 2025-06-28 This second volume is devoted to the disclosure of the peculiarities of sustainable development of business 4 0 as a subject of the digital economy It systematizes the components of sustainable development of business 4 0 in the digital economy markets The key areas of sustainable development management in business 4 0 in the digital economy markets are identified Corporate environmental responsibility in support of sustainable development of business 4 0 in the digital economy markets is considered The international experience of sustainable development of business 4 0 in the digital economy markets is highlighted Recommendations for the sustainable development of business 4 0 in the digital economy of the Decade of Action are proposed **The Second Singularity** Pravir Malik, 2019-11-24 It has been said that the future of Life is about Artificial Intelligence AI and that as AI advances a point will be reached the Singularity when humans will no longer have a clue as to what is going on nor why Essentially as a species humans will at this point have been marginalized by a global singular intelligence whose capabilities far outstrip human intelligence On the contrary this book will make the case that the future of Life is enabled by the pre existent complexity that exists in every iota of it and that there have already been a series of light based epiphanies by virtue of which Life in its continuing complexities has emerged as partial singularities and further will culminate in a Second Singularity as more of our species consciously opens to the fullness of Light The power and capabilities of the Second Singularity will far outstrip any AI based singularity This pre existent complexity derives from the fact that Light exists in multiple states simultaneously Hence there is a fundamental and single light based edifice that informs our universe and it is by virtue of this light based edifice that all matter all life all mind and all emergences beyond the level of mind will surface The future of life hence cannot be due to AI At best AI can create a process by which many tasks that usually require utilization of the fundamental light derived capacity of intelligence in order to be completed can be completed by an exhaustively repetitive running of algorithms driven by massive computing power hence giving the illusion of intelligence Projected forward the exhaustively repetitive running of algorithms driven by massive computing power endow a practically ubiquitous digitally enabled strata to control many tasks and this may create the phenomenon of a singularity in which humankind effectively cannot even fathom how things are happening anymore and is

seemingly outpaced and outthought at every step in every direction by an intelligence that appears to be all knowing all present and all powerful But this kind of singularity is fundamentally separated from the light based edifice behind all things and from which all things rise It is hence not a true singularity in the sense of a finite function assuming infinite value but is fundamentally limited in its scope by virtue of its disconnection from the founts of Life This does not preclude an AI based singularity from having massive practical power that can have an enormous destructive or constructive effect on humankind and material life What it does mean though is that there is another singularity a human founded singularity the Second Singularity which can exceed the limits of any AI based singularity due to its fundamental union with the light based edifice that is behind and informs all of Life The possible human founded singularity it will be discovered is one in a long series of naturally occurring though partial singularities that derive their existence from a fundamental union with the light based edifice behind all things Such partial singularities are characterized by having all the power of the light edifice behind them though the emergences in such partial singularities are not necessarily aware of their oneness with the light based edifice In the Second Singularity humans become aware of such oneness becoming conscious projections animated by a single intelligence love and power of which they are a part It is hence no more the human level capacity that drives such humans but the infinite capacities of the one light based edifice that drives This book focuses on the mathematics of emergence of these naturally occurring partial singularities leading up to the possible human founded singularity that will endow humankind with the potential for extraordinary capacities

Books in Print Supplement ,2002 Approaches to Offender Rehabilitation in Asian Jurisdictions Chi Meng Chu,Michael Daffern,2024-04-04 This book aims to understand how Asian jurisdictions conceptualise rehabilitation within both the correctional and forensic mental health sectors Little has been written about rehabilitation practices for people in criminal justice and forensic mental health services in Asia Although there is some recognition of the need to develop and or adjust rehabilitation practices for non white non western peoples in Western jurisdictions the extent to which Western derived practices have been considered adjusted or adopted in Asian countries is not well known This book includes contributions from an international team who explore the ways in which history culture religion and resources impact how rehabilitation is conceptualised and offered in multiple Asian countries It aims to provide an understanding of the relative merits of contemporary Western practices across different Asian countries and consider how these practices have been adopted and adapted within correctional and forensic mental health sectors This book is essential for administrators who are developing rehabilitation strategies and for practitioners working with people who have a history of offending behaviour
