MacKenzie,Desiree Tommasi,2019-06-28 Tremendous advances in oceanographic observing and modeling systems over the last decade have led to unprecedented developments in the nature of information available to marine science While improvements in observational technologies and networks have garnered much attention remarkable developments in forecasting the ocean have received much less focus Exploiting this new predictive skill to improve scientific understanding generate advice and aid in the management of marine resources is emerging as one of the new challenges of marine science Translating predictions of the physical environment into biological outcomes however is not straightforward Fisheries scientists for example have been trying to understand the links between physics and biology and generate predictions of variables such as recruitment for close to a century with limited success Nevertheless spatial distributions and the timing of key events which have received less focus are often tightly linked to the physical environment and may have management relevant applications The first such forecasts based on this skill are now starting to emerge This *Frontiers in Marine Science Research Topic* provides a snapshot of the state of the art in Marine Ecological Prediction It covers the opportunities for developing such forecasts technical approaches that could be employed and examples where the technology is already being applied This body of work therefore marks an important milestone on the route to developing this new and exciting field of marine science **Visitors to Versailles** Daniëlle Kisluk-Grosheide,Bertrand Rondot,2018-04-16 What was it like to visit one of the most magnificent courts of Europe Based on a wealth of contemporary documents and surviving works of art this lavish book explores the experiences of those who swarmed the palace and grounds of Versailles when it was the seat of the French monarchy Engaging essays describe methods of transportation the elaborate codes of dress and etiquette precious diplomatic gifts royal audiences and tours of the palace and gardens Also presented are the many types of visitors and guests who eagerly made their way to this center of power and culture including day trippers and Grand Tourists European diplomats overseas ambassadors incognito travelers and Americans Through paintings and portraits furniture costumes and uniforms arms and armor guidebooks and other works of art *Visitors to Versailles* illuminates what travelers encountered at court and what impressions gifts and souvenirs they took home with them In bringing to life their experiences this

Gluten-Related Disorders: Pathogenesis, Diagnosis, and Treatment Simone Baldi, Amedeo Amedei, Isabel Comino, Ángela Ruiz-Carnicer, Carolina Sousa, 2025-03-26 Celiac disease CD is an autoimmune condition triggered by gluten

consumption in individuals with a genetic predisposition It is characterized by villous atrophy intraepithelial lymphocytosis and crypt hyperplasia of the small bowel This condition is marked by chronic inflammation which can be resolved by

eliminating gluten containing foods from the diet known as a gluten free diet GFD Although CD primarily affects the small intestine it exhibits a wide range of symptoms including both intestinal and extraintestinal symptoms which can also range

from mild to severe and even include subclinical forms Based on more recent epidemiological data loss of gluten tolerance may occur at the time of its introduction into the diet or at any time in life suggesting that other environmental factors must play a role in CD development Specifically an imbalance of the gut microbiota composition and a consequent dysregulated intestinal metabolic profile including an altered short chain fatty acids production has recently been related to CD onset Even non celiac gluten wheat sensitivity NCGS WS is a clinical entity characterized by intestinal and extraintestinal symptoms induced by gluten ingestion but it occurs in the absence of wheat allergy or CD The pathogenesis of NCGS WS is still uncertain since several different substances other than gluten such as fermentable oligo di monosaccharides and polyols may be involved in its onset Lastly concerning CD celiac disease it has also been suggested that impaired intestinal barrier function increased permeability and gut dysbiosis are important factors in the development of NCGS or WS development Gluten related disorders are heterogeneous conditions and thus require a multidisciplinary approach for a better understanding and management The absence of a conclusive diagnosis often results in decreased adherence to GFD which can negatively affect the health of those who truly suffer from gluten related disorders Novel insights into pathomechanisms novel biomarkers and additional therapeutic strategies are urgently needed to detect a pathological response more efficiently to gluten to improve clinical diagnosis and management of these diseases Therefore this Research Topic aims to provide new insights into the pathogenesis diagnosis and management of gluten related disorders
