INSTALLATION INSTRUCTIONS

1. Establish a uniform and consistent naming convention.
2. Review the data that includes both numbers, characters and punctuation (e.g. currency, percentage, dates, or text entered in numerical format). Take care not to format either value by hiding the true content of the value. For example, if the number entered is negative, changes in data will appear correct, but not when managers view individual reports. These "data display problems" are not acceptable.
3. Check accuracy: Are the numbers and characters displayed accurately?
4. Consider the order in which data is displayed: Does the order and the column that contains the data being formatted reflect the content of the data? Is it easy to read? Does it fit into the table?
5. To assist users to find, understand and access information in a report quickly, follow these 10 steps: a. Try to minimize horizontal space and use a vertical column.
6. Maximize space saving by including columns in 40-degree angle with rotating and changing the text size of the text. After changing the order of items (Figure 4), the horizontal space takes up more than 100% of the screen, and the data is not fully visible.
7. Maximize the width of the column.
8. Note: To optimize the report data, minimize the column width. The column width should be 100% of the screen. The column width should be 100% of the screen. The column width should be 100% of the screen.
