Sensor Networks Gianluigi Ferrari, 2010-03-10 The idea of this book comes from the observation that sensor networks represent a topic of interest from both theoretical and practical perspectives The title and lines that sensor networks offer the unique opportunity of clearly linking theory with practice In fact owing to their typical low cost academic researchers have the opportunity of implementing sensor network testbeds to check the validity of their theories algorithms protocols etc in reality Likewise a practitioner has the opportunity of understanding what are the principles behind the sensor networks under use and thus how to properly tune some accessible network parameters to improve the performance On the basis of the observations above the book has been structured in three parts Part I is denoted as Theory since the topics of its chapters are apparently detached from real scenarios Part II is denoted as Theory and Practice since the topics of its three chapters although theoretical have a clear connection with specific practical scenarios Part III is denoted as Practice since the topics of its chapters are clearly related to practical applications
