Teacher's Guide to Using the Next Generation Science Standards With Gifted and Advanced Learners Cheryll M. Adams, Alicia Cotabish, Debbie Dailey, 2021-09-23 A Teacher's Guide to Using the Next Generation Science Standards With Gifted and Advanced Learners provides teachers and administrators with practical examples of ways to build comprehensive coherent and rigorous science learning experiences for gifted and advanced students from kindergarten to high school. It provides an array of examples across the four domains of science: physical sciences, Earth and space sciences, life sciences, and engineering technology and applications of science. Each learning experience indicates the performance expectation addressed and includes a sequence of activities, implementation examples, connections to the CCSS Math and CCSS ELA, and formative assessments. Chapters on specific instructional and management strategies, assessment, and professional development suggestions for implementing the standards within the classroom will be helpful for both teachers and administrators.

Big Data and High Performance Computing L. Grandinetti, G.R. Joubert, M. Kunze, 2015-10-20 Big Data has been much in the news in recent years and the advantages conferred by the collection and analysis of large datasets in fields such as marketing, medicine, and finance have led to claims that almost any real world problem could be solved if sufficient data were available. This is of course a very simplistic view and the usefulness of collecting, processing, and storing large datasets must always be seen in terms of the communication, processing, and storage capabilities of the computing platforms available. This book presents papers from the International Research Workshop Advanced High Performance Computing Systems held in Cetraro, Italy, in July 2014. The papers selected for publication here discuss fundamental aspects of the definition of Big Data as well as considerations from practice where complex datasets are collected, processed, and stored. The concepts, problems, methodologies, and solutions presented are of much more general applicability than may be suggested by the particular application areas considered. As a result, the book will be of interest to all those whose work involves the processing of very large data sets, exascale computing, and the emerging fields of data science.

Exemplars of Assessment in Higher Education Jane Marie Souza, Tara A. Rose, 2023-07-03 Co-published with While assessment may feel to constituents like an activity of accountability simply for accreditors, it is most appropriate to approach assessment as an activity of accountability for students. Assessment results that improve institutional effectiveness, heighten student learning, and better align resources serve to make institutions stronger for the benefit of their students, and those results also serve the institution or program well during the holistic evaluation required through accreditation. From the foreword by Heather Perfetti, President of the Middle States Commission on Higher Education: Colleges and universities struggle to understand precisely what is being asked for by accreditors, and this book answers that question by sharing examples of success reported by schools specifically.

recommended by accreditors This compendium gathers examples of assessment practice in twenty four higher education institutions twenty three in the U S and one in Australia All institutions represented in this book were suggested by their accreditor as having an effective assessment approach in one or more of the following assessment focused areas assessment in the disciplines co curricular course program institutional assessment equity and inclusion general education online learning program review scholarship of teaching and learning student learning or technology These examples recommended by accrediting agencies makes this a unique contribution to the assessment literature The book is organized in four parts Part One is focused on student learning and assessment and includes ten chapters The primary focus for Part Two is student learning assessment from a disciplinary perspective and includes four chapters Part Three has a faculty engagement and assessment focus and Part Four includes four chapters on institutional effectiveness and assessment with a focus on strategic planning This book is a publication of the Association for the Assessment of Learning in Higher Education AALHE an organization of practitioners interested in using effective assessment practice to document and improve student learning

Detection and Estimation of Working Memory States and Cognitive Functions Based on Neurophysiological Measures Felix Putze, Christian Mühl, Fabien Lotte, Stephen Fairclough, Christian Herff, 2019-02-05 Executive cognitive functions like working memory determine the success or failure of a wide variety of different cognitive tasks such as problem solving navigation or planning Estimation of constructs like working memory load or memory capacity from neurophysiological or psychophysiological signals would enable adaptive systems to respond to cognitive states experienced by an operator and trigger responses designed to support task performance e g by simplifying the exercises of a tutor system when the subject is overloaded or by shutting down distractions from the mobile phone The determination of cognitive states like working memory load is also useful for automated testing assessment or for usability evaluation While there exists a large body of research work on neural and physiological correlates of cognitive functions like working memory activity fewer publications deal with the application of this research with respect to single trial detection and real time estimation of cognitive functions in complex realistic scenarios Single trial classifiers based on brain activity measurements such as electroencephalography functional near infrared spectroscopy physiological signals or eye tracking have the potential to classify affective or cognitive states based upon short segments of data For this purpose signal processing and machine learning techniques need to be developed and transferred to real world user interfaces The goal of this Frontiers Research Topic was to advance the State of the Art in signal based modeling of cognitive processes We were especially interested in

research towards more complex and realistic study designs for example collecting data in the wild or investigating the interaction between different cognitive processes or signal modalities Bringing together many contributions in one format allowed us to look at the state of convergence or diversity regarding concepts methods and paradigms
