Augmented Corporate Valuation Roberto Moro-Visconti,2022-04-23 Standard corporate evaluation approaches are improved by trendy innovation especially as it concerns technological scale up and environmental issues such as digital networking or ESG compliance Whereas traditional firm appraisal follows institutional guidelines and best practices frontier research still must define the boundaries

of these trendy issues linking a strong theoretical background to practical advances that still need fine tuning This book written by an academic who is also a senior consultant combines theoretical rigor with practical insights providing an innovative framework for researchers evaluators managers and practitioners Lifespan Neurorehabilitation Dennis Fell,Karen Y Lunnen,Reva Rauk,2018-01-02 The neuro rehab text that mirrors how you learn and how you practice Take an evidence based approach to the neurorehabilitation of adult and pediatric patients across the lifespan that reflects the APTA s patient management model and the WHO s International Classification of Function ICF You ll study examination and interventions from the body structure function impairments and functional activity limitations commonly encountered in patients with neurologic disorders Then understanding the disablement process you ll be able to organize the clinical data that leads to therapeutic interventions for specific underlying impairments and functional activity limitations that can then be applied as appropriate anytime they are detected regardless of the medical diagnosis *The End of Modern Medicine* Laurence Foss,2012-02-01 The End of Modern Medicine chronicles the work of a small influential band of medical theorists and clinicians who over the past decade have sought to redress the physical fundamentalism of the biomedical model that shaped their professional training Laurence Foss challenges the prevailing medical model whereby mind and body are essentially separated and charts a new psychobiological course Asking fresh questions raising new possibilities probing long established preconceptions Foss presents a radically reconfigured medical model This model accounts for the full range of findings in the experimental literature most notably those surfacing over the past quarter century in psychophysiological studies which show a correlation between psychosocial variables and disease susceptibility that are in line with what more basic sciences tell us about the behavior of material systems and the nature of scientific explanation Foss also critically analyzes the regulative ideals of today s medical research community and puts modern science itself from which these ideals derive under a microscope *Moderator-topics* ,1922 Mind as Machine Margaret A. Boden,2006 Cognitive science is among the most fascinating intellectual achievements of the modern era The quest to understand the mind is an ancient one But modern science has offered new insights and techniques that have revolutionized this enquiry Oxford University Press now presents a masterly history of the field told by one of its most eminent practitioners Psychology is the thematic heart of cognitive science which aims to understand human and animal minds But its core theoretical ideas are drawn from cybernetics and artificial intelligence and many cognitive scientists try to build functioning models of how the mind works In that sense Margaret Boden suggests its key insight is that mind is a very special machine Because the mind has many different aspects the field is highly interdisciplinary It integrates psychology not only with cybernetics AI but also with neuroscience and clinical neurology with the philosophy of mind language and logic with linguistic work on grammar semantics and communication with anthropological studies of cultures and with biological and A Life research on animal behaviour evolution and life itself Each of these disciplines in its own way asks what the mind is what it does how it works

how it develops and how it is even possible Boden traces the key questions back to Descartes's revolutionary writings and to the ideas of his followers and his radical critics through the eighteenth and nineteenth centuries Her story shows how controversies in the development of experimental physiology neurophysiology psychology evolutionary biology embryology and logic are still relevant today Then she guides the reader through the complex interlinked paths along which the study of mind developed in the twentieth century Cognitive science covers all mental phenomena not just cognition knowledge but also emotion personality psychopathology social communication religion motor action and consciousness In each area Boden introduces the key ideas and researchers and discusses those philosophical critics who see cognitive science as fundamentally misguided And she sketches the waves of resistance and acceptance on the part of the media and general public showing how these have affected the development of the field No one else could tell this story as Boden can she has been a member of the cognitive science community since the late 1950s and has known many of its key figures personally Her narrative is written in a lively swift moving style enriched by the personal touch of someone who knows the story at first hand Her history looks forward as well as back besides asking how state of the art research compares with the hopes of the early pioneers she identifies the most promising current work *Mind as Machine* will be a rich resource for anyone working on the mind in any academic discipline who wants to know how our understanding of mental capacities has advanced over the years

In Defense of an Evolutionary Concept of Health Dr Mahesh Ananth, 2012-10-01 One of the most controversial contemporary debates on the concept of health is the clash between the views of naturalists and normativists Naturalists argue that although health can be valued or disvalued the concept of health is itself objective and value free In contrast normativists argue that health is a contextual and value laden concept and that there is no possibility of a value free understanding of health This debate has fueled many of the often very acrimonious disputations arising from the claims of health disease and disability activists and charities and the public policy responses to them In responding to this debate Ananth both surveys the existing literature with special focus on the work of Christopher Boorse and argues that a naturalistic concept of health drawing on evolutionary considerations associated with biological function homeostasis and species design is defensible without jettisoning norms in their entirety

M2 Models and Methodologies for Community Engagement Reena Tiwari, Marina Lommerse, Dianne Smith, 2014-03-10 How can we engage communities What is empowerment To what extent should the project process be participatory How is an outsider insider relationship handled How do researchers negotiate with the hegemony of western cultural interpretations How are organizational and contextual influences handled in a project What leadership demands do such projects place on researchers What is capacity building What are creative leaders and creative communities How does the researcher journey from their studio to the situation *M2 Models and Methodologies for Community Engagement* discusses key theoretical constructs community engagement capacity building and community empowerment in order to demonstrate how theory and practice are relevant to the development of

forms of community involvement The book maps the attributes of community based projects by moving beyond simply bringing people together from a variety of disciplines and taking an approach which is transdisciplinary and applicable across cultures and genres Here all people including the community are ongoing contributors and can freely move between their own and others discipline specific arenas M2 differs from and extends on other works in this field of practice and research in that its transdisciplinary collaborative approach positions the community as a particular kind of discipline to create real change in diverse locations and fields of experience The book is in itself a model of community engagement as the researchers have formed a community of research and practice for change and have developed a transformative model for community engagement that is greater than the sum of its parts hence M2 M2 offers a valuable resource for students researchers academics practitioners policy developers and volunteers from the fields of architecture interior architecture health planning anthropology education home economics communication political studies and development studies
