Considine, Glenn D. Considine, 2012-12-06

The authors and editors of this Handbook have attempted to fill a serious gap in the professional literature on industrial automation Much past attention has been directed to the general concepts and philosophy of automation as a way to convince owners and managers of manufacturing facilities that automation is indeed one of the few avenues available to increase productivity and improve competitive position Seventy three contributors share their knowledge in this Handbook Less attention has been given to the What and How of automation To the extent feasible and practical within the confines of the pages allowed this Handbook concentrates on the implementation of automation Once the Go signal has been given by management concrete details not broad definitions and philosophical discussions are required To be found in this distinctly different book in the field are detailed parameters for designing and specifying equipment the options available with an evaluation of their relative advantages and limitations and insights for engineers and production managers on the operation and capabilities of present generation automation system components subsystems and total systems In a number of instances the logical extension of current technology into the future is given A total of 445 diagrams and photos and 57 tables augments detailed discussions In addition to its use as a ready reference for technical and management personnel the book has wide potential for training and group discussions at the college and university level and for special education programs as may be provided by consultants or by in house training personnel Subject Guide to Books in Print ,1997 Mobile Robotics: Solutions And Challenges - Proceedings Of The Twelfth International Conference On Climbing And Walking Robots And The Support Technologies For Mobile Machines Mohammad Osman Tokhi, O Tosun, Gurvinder S Virk, H L

Akin,2009-08-26 This book provides state of the art scientific and engineering research findings and developments in the area of mobile robotics and associated support technologies The book contains peer reviewed articles presented at the CLAWAR 2008 conference Robots are no longer confined to industrial manufacturing environments with a great deal of interest being invested in the use of robots outside the factory environment The CLAWAR conference series established as a high profile international event acts as a platform for the dissemination of research and development findings and supports such a trend to address the current interest in mobile robotics in meeting the needs of mankind in various sectors of the society These include personal care public health and services in the domestic public and industrial environments The editors of the book have extensive research experience and publications in the area of robotics specifically in mobile robotics and their experience is reflected in the careful editing of the contents in the book *Trends in Intelligent Robotics, Automation, and Manufacturing* S.G.
