## **Physical Science Paper 2 2013 September:**

**Can Science Fix Climate Change?** Mike Hulme, 2014-06-04 Climate change seems to be an insurmountable problem. Political solutions have so far had little impact. Some scientists are now advocating the so-called Plan B, a more direct way of reducing the rate of future warming by reflecting more sunlight back to space, creating a thermostat in the sky. In this book, Mike Hulme argues against this kind of hubristic techno-fix. Drawing upon a distinguished career studying the science, politics, and ethics of climate change, he shows why using science to fix the global climate is undesirable, ungovernable, and unattainable. Science and technology should instead serve the more pragmatic goals of increasing societal resilience to weather risks, improving regional air quality, and driving forward an energy technology transition. Seeking to reset the planet's thermostat is not the answer.

**Educational Assessment** Christine Harrison, Constant Leung, David Pepper, 2023-10-19 This book explores and builds on the extraordinary work of Professor Paul Black across assessment and pedagogy across the curriculum, including STEM, humanities, and social science subjects. This book explores the influence that Black has had within educational settings, focusing on interpretations of the work and scholarship he has achieved across a range of settings and on the ways scholars who have worked with him or been influenced by his ideas have developed their research and teaching. The contributions are presented under three thematic sections, each of which reflects a set of shared educational concerns and values, drawing on the natural and social sciences and developments in public policy. These concerns and values, with their emphasis on teacher assessment, provide a basis for a strategic, informed, and coherent response to challenges in education, such as the cancellation of public examinations in the face of the Covid-19 pandemic.

**The Secure and the Dispossessed** Nick Buxton, Ben Hayes, 2015-11-20 While the world's scientists and many of its inhabitants despair at the impact of climate change, corporate and military leaders see nothing but opportunities. For them, melting ice caps mean newly accessible fossil fuels, borders to be secured from climate refugees, social conflicts to be managed, and more failed states in which to intervene. They are securing their assets at the expense of the planet and its inhabitants. *The Secure and the Dispossessed* looks at these deadly approaches with a critical eye. It also considers the flip side: that the legitimacy of the elite is under unprecedented pressure from resistance by communities, to resource grabs, to those creating new ecological and socially just models for managing our energy, food, and water. Topics covered include geoengineering, militarism, refugee protection, greenwashing, and the agricultural crisis, among others. Adaptation and resilience to a climate-changed world is desperately needed, but the form it will take will affect all of our futures.

[Assessment of Solid-State Lighting, Phase Two](#) National Academies of Sciences, Engineering, and Medicine,Division on Engineering and Physical Sciences,Board on Energy and Environmental Systems,Committee on Assessment of Solid-State Lighting, Phase 2,2017-06-11 The standard incandescent light bulb which still works mainly as Thomas Edison invented it converts more than

90% of the consumed electricity into heat Given the availability of newer lighting technologies that convert a greater percentage of electricity into useful light there is potential to decrease the amount of energy used for lighting in both commercial and residential applications Although technologies such as compact fluorescent lamps CFLs have emerged in the past few decades and will help achieve the goal of increased energy efficiency solid state lighting SSL stands to play a large role in dramatically decreasing U S energy consumption for lighting Since the publication of the 2013 National Research Council report Assessment of Advanced Solid State Lighting the penetration of SSL has increased dramatically with a resulting savings in energy and costs that were foreshadowed by that study What was not anticipated then is the dramatic dislocation and restructuring of the SSL marketplace as cost reductions for light emitting diode LED components reduced profitability for LED manufacturers At the same time there has been the emergence of new applications for SSL which have the potential to create new markets and commercial opportunities for the SSL industry Assessment of Solid State Lighting Phase Two discusses these aspects of change highlighting the progress of commercialization and acceptance of SSL and reviewing the technical advances and challenges in achieving higher efficacy for LEDs and organic light emitting diodes This report will also discuss the recent trends in SSL manufacturing and opportunities for new applications and describe the role played by the Department of Energy DOE Lighting Program in the development of SSL
