*Current Topics in Phylogenetics and Phylogeography of Terrestrial and Aquatic Systems* Kesara Anamthawat-Jónsson, 2012-03-07 Mapping phylogenetics on geographical scales is one of the most important scientific aspects of bioscience research Changes in the environment have evidently shaped the geographical distribution of organisms on land and in the oceans seen today Overexploitation of key species has caused not only changes in the distribution and diversity of organisms and composition of the ecosystems but is also leading to species extinction at accelerating rates It is our duty as scientists to find ways of protecting the species endangered with extinction and preventing other species from entering the endangered stage To manage this effectively we need to map species distribution understand life history traits define genetic variation within species and populations identify lineages especially at the molecular level and correlate the historical phylogenetic components with the spatial distributions of gene lineages In this book phylogenetics and phylogeography of a diverse range of organisms are reviewed from microorganisms causing gastroenteritis in humans fishes in the Southwest Atlantic Ocean and spiders of the western Indian Ocean to mountain tapirs in South America and birch tree species of the Arctic tundra

Development of Sensory and Neurosecretory Cell Types Gerhard Schlosser,2021-06-17 Most of the cranial sense organs of vertebrates arise from embryonic structures known as cranial placodes Such placodes also give rise to sensory neurons that transmit information to the brain as well as to many neurosecretory cells This book focuses on the development of sensory and neurosecretory cell types from cranial placodes by introducing the vertebrate head with its sense organs and neurosecretory organs and providing an overview of the various cranial placodes and their derivatives including evidence of common embryonic primordia Schlosser discusses how these primordia are established in the early embryo and how

individual placodes develop The latter chapters explain how various placodally derived sensory and neurosecretory cell types differentiate into discrete structures      *Teaching and Learning of Energy in K - 12 Education* Robert F.
