**Digination** Robert C. MacDougall, 2012 The shift from orality to literacy that began with the invention of the phonetic alphabet and which went into high gear with Gutenberg s printing press more than 500 years ago helped make the modern world Some commentators have argued that this shift from orality to literacy marked a much broader cultural shift of cataclysmic proportions Today with everything from e mail to blogs iPods and podcasts through Google Yahoo eBay and with cutting edge smart phones we find ourselves developing relationships with these newest communication tools that aren t simply allowing us to communicate faster farther and with more ease than ever before We aren t just moving around ideas data and information at unimaginable speed and scale Our interminglings and fusions with digital communication technologies are also altering both individual and group consciousness in fundamental ways how we form and sustain relationships how we think and perceive what it means to see and to feel We are remaking human identity once more and manufacturing a new kind of culture along the way The processes bound up in our digination may well be consequential to the trajectory of human evolution That time honored trope the notion that technology is not the problem rather it s how people use technology that s the problem is shown to be wanting Highlighting Marshall McLuhan s tetrads or laws of media as a primary tool of analysis R C MacDougall argues in line with other media ecologists that it s not so much how we use certain tools that matters it s that we use them More than any other technological form perhaps communication technologies play particularly powerful and systemic roles in our culture or any culture for that matter Late adopters and even abstainers are not exempt from the psychological social and cultural effects and side effects of modern digital communication technology While there are certainly varying degrees of immersion that is to say while some of us live in the high rise downtown district some at the city limits and still others out in the proverbial woods we all live in Digination today

I just cannot write or I am not a good writer are familiar complaints from students in academia. Many of them claim they cannot express themselves clearly in written text and their lack of this skill impedes them in their academic career. In this book Nancy A. Wasser argues that teachers can help solve this when they start viewing writing not as secondary to reading but as the equally important side of the same coin. Those who cannot read will not be able to write. Wasser explains how teaching and regular practicing of writing skills from an early age onwards helps children grow into students who are self-aware of their voices. By employing narrative as a process of learning to write and a way to read, teachers can teach children the art of writing while also making children more aware of their own constructions of narrative. Combining the focus on individual and group expression in writing lessons, students can trace and reflect on their own life transformations through their writing process. Good writers are not born that way but made through effort and practice. Changes in curriculum may not only lead to better expressed citizens but also to more balance between teacher and children voices. **English for Writing Research Papers** Adrian Wallwork, 2011-04-01. Publishing your research in an international journal is key to your success in academia. This guide is based on a study of referees' reports and letters from journal editors on reasons why papers written by non-native researchers are rejected due to problems with English usage. It draws on English-related errors from around 5000 papers written by non-native authors, 500 abstracts by PhD students and over 1000 hours of teaching researchers how to write and present research papers. With easy-to-follow rules and tips and with examples taken from published and unpublished papers, you will learn how to prepare and structure a manuscript, increase readability and reduce the number of mistakes you make in English by writing concisely with no redundancy and no ambiguity. Plan and organize your paper and structure each paragraph and each sentence so that the reader can easily follow the logical build-up towards various conclusions. Write a title and an abstract that will attract attention and be read. Decide what to include in the various parts of the paper: Introduction, Methodology, Discussion, etc. Select from over 700 useful phrases, highlight your claims and contribution, avoid plagiarism and make it 100% clear whether you are referring to your own work or someone else's. Choose the correct tenses and style: active or passive.
