<p><b>a.</b> The ultimate source of variation. Individual mutations occur so rarely that mutation alone usually does not change allele frequency much.</p>	<p><b>b.</b> A very potent agent of change. Individuals or gametes move from one population to another.</p>	<p><b>c.</b> Inbreeding is the most common form. It does not alter allele frequency but changes the proportion of heterozygotes.</p>	<p><b>d.</b> Statistical accidents. The random fluctuation in allele frequencies increases as population size decreases.</p>	<p><b>e.</b> The only agent that produces adaptive evolutionary changes.</p>

professional and academic achievements while many of the essays in Part B also reflect on Christof as a person. The editors all based at the Faculty of Law UP are colleagues and friends who worked closely with Christof. Frans Viljoen succeeded Christof as Director of the Centre for Human Rights. Christof was his doctoral supervisor, mentor and research collaborator. Charles Fombad worked with Christof at ICLA and took over as ICLA Director after Christof's passing. Dire Tladi, an ICLA fellow, had his office just across from Christof in ICLA. As member of the International Law Commission, he shared with Christof high level engagement with the UN. While Christof served on the Human Rights Committee, his colleague Ann Skelton serves on the Committee on the Rights of the Child. Magnus Killander worked closely with Christof as co-author and co-editor. Christof was also his doctoral supervisor. The publication date of this book is 10 January 2022, which is the date marking 63 years since Christof's birth. *Psychobiology of Personality* Marvin Zuckerman, 2005-04-11. Personality is now understood to be a function of both biological and environmental influences. This revised and updated edition of *Psychobiology of Personality* describes what is currently known about the biological basis of the primary personality traits including genetic, neurological, biochemical, physiological and behavioral influences. Emphasis is placed on understanding the connections between phenomena at these levels. The research discussed makes use of animal models based on experimental brain research as well as human clinical and normal personality research. Chapters are devoted to temperament and personality trait structure, psychobiological methods and each of four major personality traits: extraversion, impulsiveness, sensation seeking and aggression. Recent advances in psychobiological methods such as molecular genetics and brain imaging have enabled us to begin to unravel the genetic and neurological sources of behavior and personality. These advances are discussed in this new edition making it essential reading for advanced students of psychology and psychiatry.
