

# Laboratory Activity #1 — Student Laboratory Packet

## **Relationships and Biodiversity**

*A Laboratory Activity for the Living Environment*

### Introduction

*Botana curas* is a valuable plant because it produces Currol, a compound used for treating certain kinds of cancer. Currol cannot be produced in the laboratory. *Botana curas* grows very slowly and is on the endangered species list, so its ability to provide Currol in large quantities is limited.

Species that are more closely related to *Botana curas* are more likely to produce the important substance Currol. Three similar plant species that are plentiful (X, Y, and Z) may be related to *Botana curas*. You will work as a researcher to:

- gather structural and molecular evidence to determine which plant species is most closely related to the hypothetical species, *Botana curas*
- use this evidence to decide which plant species is most likely to serve as a source of the important substance Currol

### Safety

- You will need to wear goggles while conducting Tests 4 and 5.
- Do not eat or drink anything in the laboratory while doing this laboratory activity.

*Important Note: Record all of your data and answers on these laboratory sheets. You will need to keep them for review before the Regents Examination. Later, you will need to transfer your answers to a separate Student Answer Packet. Your teacher will use the packet in grading your work, and the school will retain it as evidence of your completion of the laboratory requirement for the Living Environment Regents Examination.*

### Structural Evidence for Relationships

Perform the following tests and record your observations in Table I on page 8 of this packet. Use a hand lens or microscope as needed.

#### Test 1-Structural Characteristics of Plants

- a. Do not remove the plant samples from the plastic bags/cards.
- b. Compare the structural characteristics of the plant samples. Record your observations in Table I (see page 8).

#### Test 2-Structural Characteristics of Seeds

- a. Do not remove the seed samples from the plastic bags/cards.
- b. Compare the structural characteristics of the seed samples. Record your observations in Table I.

"Relationships and Biodiversity" is a laboratory activity produced by the State Education Department for use in fulfilling part of the laboratory requirement for the Regents Examination in Living Environment. Reproducing any part of this laboratory activity by other than New York State school personnel is illegal.
