

ROCK CANDY SCIENCE EXPERIMENT

QUESTION:
 WILL THE TEMPERATURE
 AFFECT THE GROWTH OF ROCK
 CANDY?

HYPOTHESIS:
 THE SUGAR CRYSTALS WILL GROW FASTER IN
 ROOM TEMPERATURE THAN COLD
 TEMPERATURE.

THEORY
 In this experiment, we will observe the growth of sugar crystals in two beakers. The first beaker will be kept at room temperature, and the second beaker will be kept in a cold environment. We will observe the growth of sugar crystals in both beakers over a period of five days. The results of the experiment will be compared to the hypothesis.

CONCLUSION
 The results of the experiment show that the sugar crystals grew faster in the room temperature beaker than in the cold beaker. This supports the hypothesis that sugar crystals grow faster in room temperature than in cold temperature.

 related Communications handicapped Children (TEACCH) Project at the University of North Carolina at Chapel Hill, the
 colloquium tackled the challenge of facilitating communications among scientists of different disciplines working in a spe-
 cialized area. The meeting proved successful in generating an interplay and information exchange among scientists of diverse
 academic and professional orientation who if not completely able to agree on common factors did nevertheless achieve
 awareness and clarification of their differences. The TEACCH conference and this volume have implications for all research
 efforts within and outside the domain of mental health. This is particularly so at a time of limited dollar resources for research
 support. The present and foreseeable future represent such a time one when communication among fields, resource
 competition between basic and applied research, biomedical versus psychosocial research and the question of research
 utilization assume a new commanding significance. Thus the question of accountability for research has come to the fore.
