When machines are likely not to be thrown away but rather, reused or sold to another person in need of this instrument or kept for sentimental personal use. This in terms of maintenance, one would need to replace the plastic knobs occasionally if they break. The energy used consists of energy to power products and access to the internet. The waste produced AA batteries can be hazardous because of the metal and chemical contents, and need to be disposed of in a specific way depending on region.

RECYCLING

When not in use, the parts of a drum machine can be recycled such as the aluminum and plastic. If broken, the instruments can be used and sold for parts, since it also is a piece of technology, many of the parts can still be used for other purposes. The type of energy used in recycling is thermal energy being used in general plastic recycling, bubble art, or recycled material to build back or make something. Waste produced included plastic can be recycled but many end up in landfills and cause pollution. Rubber is harder to recycle, and can have negative impacts on the environment when they end up in landfills.
