These optimizations seek an airfoil design of minimum operating cost that satisfies realistic design constraints. This report documents the organization of the T STAEBL computer program, its design and analysis procedure, its optimization procedure, and provides an overview of the input required to run the program as well as the computer resources required for its effective use. Additionally, usage of the program is demonstrated through a validation test case. Brown K W Unspecified Center NAS3 22525 RTOP 505 63 5B      The Swiss Army Knife Owner's Manual Michael M. User's Manual, Version 1.0 National Aeronautics and Space Administration (NASA), 2018-07-17 The Blade Assessment Ice Impact BLASIM computer code can analyze solid hollow composite and super hybrid blades. The solid blade is made up of a single material where hollow composite and super hybrid blades are constructed with prescribed composite layup. The properties of a composite blade can be specified by inputting one of two options: 1 individual ply properties or 2 fiber matrix combinations. When the second option is selected, BLASIM utilizes ICAN Integrated Composite ANalyzer to generate the temperature moisture dependent ply properties of the composite blade. Two types of geometry input can be given: airfoil coordinates or NASTRAN type finite element model. These features increase the flexibility of the program. The user's manual provides sample cases to facilitate efficient use of the code while gaining familiarity.
