GEOGRAPHY, 2008 **Emerging pollutants** UNESCO, 2025-04-01 **Community Health Workers: Describing the Breadth of Interventions and Contexts Across the World** Mathieu Nacher, Nicolas Vignier, 2025-05-15

Social inequalities in health remain a challenging problem throughout the world. Despite a variety of specific contexts, vulnerable populations often present to care later with more advanced health problems and often greater fatality rates at younger ages. To remediate this, health services NGOs project personnel to liaise with the communities and serve as an intermediary between health professionals and patients from vulnerable populations. The denominations may vary: health mediation, cultural mediation, community health workers, *Agente de Sa de* and sometimes entail different functions. Hard evidence on the impact of these mediators is often lacking because of the differences in contexts, specific health problems considered and what mediation entails in different countries. In this Research Topic, we encourage submissions of articles that describe a range of experiences for different contexts where mediation, health mediation, cultural mediation, community health workers, *Agente de Sa de* programmes are deployed for public health issues. From this variety of experiences, we hope this special issue will constitute a precious repository of experiences and contexts that could be transferable and scalable interventions for others.

Emerging Pollutants Sarantuyaa Zandaryaa, Ali Fares, Gabriel Eckstein, 2025-04-11. This open access book focuses on the importance of reducing pollution and protecting water resources for the health of people and the environment. Water is vital for life on Earth. The quality of the world's freshwater resources is deteriorating due to the rise in pollution levels, which puts the health of people and the environment at risk. Emerging pollutants, a new class called Contaminants of Emerging Concern, pose a global water quality challenge. The identification and implementation of appropriate regulatory monitoring, prevention and control measures are hindered by limited scientific understanding and knowledge about sources and pathways of emerging pollutants, their behaviour and fate in the environment and potential human and ecosystem health risks. The book presents selected contributions to the UNESCO IWRA Online Conference Emerging Pollutants Protecting Water Quality for the Health of People and the Environment held on 17-19 January 2023. It offers an extensive overview of current research findings on emerging pollutants in aquatic ecosystems, groundwater contamination, wastewater management and reuse, circular economy approaches to pollutant lifecycle management and the prioritization of emerging pollutants in the hydro cycle. Based on scientific evidence and policy-relevant research findings, the book's concluding chapter highlights research and policy gaps, offering recommendations for strategic and practical ways to manage emerging pollutants towards sustainable water management in the face of global changes and evolving environmental threats. This book is a scientific output in the framework of UNESCO Intergovernmental Hydrological Programme's Ninth Phase Science for a Water Secure World in a Changing Environment IHP IX 2022-2029 and UNESCO IHP's International Initiative on Water Quality IIWQ in collaboration with the International Water Resources Association (IWRA).
