atmospheric studies published in 2010 significant advances were achieved in the fields of engineering propagation modelling
and atmospheric remote sensing methods The global infrasound network which consists of the International Monitoring
Network IMS for nuclear test ban verification completed by an increasing number of regional cluster arrays deployed around
the globe has evidenced an unprecedented potential for detecting locating and characterizing various natural and man made
sources In recent years infrasound has evolved into a broad interdisciplinary field encompassing academic disciplines of
geophysics and innovative technical and scientific developments The advances in innovative ground based instruments
including infrasound inversions for continuous observations of the stratosphere and mesosphere provide useful insights into
the geophysical source phenomenology and atmospheric processes involved Systematic investigations into low frequency
infrasound signals and the development of complementary observational platforms point out new insights into the dynamics
of the middle atmosphere which play a significant role in both tropospheric weather and climate This monitoring system also
provides continuous relevant information about natural hazards with high societal benefits like on going volcanic eruptions
surface earthquakes meteorites or severe weather With this new edition researchers and students benefit from a
comprehensive content of both fundamental and applied inter disciplinary topics *Technical Abstract Bulletin* ,
