

The Periodic Table and Periodic Law

Section 6.1 Development of the Modern Periodic Table

In your textbook, reads about the history of the periodic table's development.

Use each of the terms below just once to complete the passage.

octaves	atomic mass	atomic number	nine
elements	properties	Henry Moseley	eight
protons	periodic law	Dmitri Mendeleev	accepted

The table below was developed by John Newlands and is based on a relationship called the law of (1) _____. According to this law, the properties of the elements repeated every (2) _____ elements. Thus, for example, element two and element (3) _____ have similar properties. The law of octaves did not work for all the known elements and was not generally (4) _____.

1	2	3	4	5	6	7
H	Li	G	Bo	C	N	O
8	9	10	11	12	13	14
F	Na	Mg	Al	Si	P	S

The first periodic table is mostly credited to (5) _____. In his table, the elements were arranged according to increasing (6) _____. One important result of this table was that the existence and properties of undiscovered (7) _____ could be predicted.

The element in the modern periodic table are arranged according to increasing (8) _____, as a result of the work of (9) _____. This arrangement is based on number of (10) _____ in the nucleus of an atom of the element. The modern form of the periodic table results in the (11) _____, which states that when elements are arranged according to increasing atomic number, there is a periodic repetition of their chemical and physical (12) _____.

The Development of the Periodic Law Francis Preston Venable,1896 **On the Discovery of the Periodic Law** John A. R. Newlands,1884 *Memorizing the Periodic Table of Chemical Elements* Darden Dickson,2008-05-30 In the fall of 1997 I took an Introduction to Chemistry class Chem 100 at Tacoma Community College Tacoma Washington We were required to memorise at least eight or ten of the more important chemical elements I asked myself at the time if it was possible to memorise the number of protons and their symbols for the entire periodic table That question grew to include memorisation of nuclear mass numbers The answer to both questions is yes and the process is a simple one as you will see The first part of the memorisation process is to use a blank Periodic Table This book provides one that you can duplicate for memory work You can also construct one with two sheets of college ruled paper a straight edge and a pen or pencil Building one for yourself is a very helpful aid in memorisation because it requires you to learn the number of chemical elements in each row and the number of rows Either way once you have a blank Periodic Table you are ready to begin your memory work First of all a chemical element is identified by the number of protons 1 Hydrogen has one Helium two Lithium has three etc The number of protons goes in sequential order from 1 to 112 each number representing an individual chemical element

Memorisation requires associating the number of protons with the chemical element and its symbol Its physical place in the Periodic Table helps in memorisation This book provides a complete sequential listing of chemical elements by the number of protons Table 1 to aid you in the memorisation process The second part of the memorisation process once the symbols for the chemical elements and the number of protons have been recorded is to memorise the formulae and the series of black numbers shown in the Memorisation Key These will help you to easily derive the nuclear mass numbers 1 I have chosen the phrase the number of protons to replace the phrase the atomic numbers for philosophy of science reasons The word atom in Greek means indivisible or uncut In the fall of 1997 I took an Introduction to Chemistry class Chem 100 at Tacoma Community College Tacoma Washington We were required to memorise at least eight or ten of the more important chemical elements I asked myself at the time if it was possible to memorise the number of protons and their symbols for the entire periodic table That question grew to include memorisation of nuclear mass numbers The answer to both questions is yes and the process is a simple one as you will see The first part of the memorisation process is to use a blank Periodic Table This book provides one that you can duplicate for memory work You can also construct one with two sheets of college ruled paper a straight edge and a pen or pencil Building one for yourself is a very helpful aid in memorisation because it requires you to learn the number of chemical elements in each row and the number of rows Either way once you have a blank Periodic Table you are ready to begin your memory work First of all a chemical element is identified by the number of protons 1 Hydrogen has one Helium two Lithium has three etc The number of protons goes in sequential order from 1 to 112 each number representing an individual chemical element Memorisation requires associating the number of protons with the chemical element and its symbol Its physical place in the Periodic Table helps in memorisation This book provides a complete sequential listing of chemical elements by the number of protons Table 1 to aid you in the memorisation process The second part of the memorisation process once the symbols for the chemical elements and the number of protons have been recorded is to memorise the formulae and the series of black numbers shown in the Memorisation Key These will help you to easily derive the nuclear mass numbers 1 I have chosen the phrase the number of protons to replace the phrase the atomic numbers for philosophy of science reasons The word atom in Greek means indivisible or uncut All the chemical elements of the Periodic Table can be broken down into smaller parts

The Basics of the Periodic Table Leon Gray, 2013-12-15 A sweeping history of both the discovery and classification of elements and the development of the modern periodic table Included are discussions of the discovery of matter atoms atomic structure molecules compounds ions and isotopes as well as the first identifications of the 118 and counting elements and the various ways they have been classified and organized by prominent scientists up to the present day periodic table Instruction in how to read the periodic table is accompanied by examinations of the various groups of elements their location on the table and their properties and practical uses This text strongly supports Common Core Standards for the reading of scientific and technical texts and accounts and furnishes ample opportunities to summarize cite

evidence and analyze connections between ideas individuals and events *The Periodic Law* David Johnson,1984

Energy Wave of the Periodic Table William C. Scott,2007 Definitive Periodic Law is revealed in arrangement of new Periodic Table repeating sequential numbers of protons discovered in Groups 1 through 18 in the elements of the new ENERGY WAVE of the Periodic Table The elements in the new ENERGY WAVE of the Periodic Table are given in the ground state which is one electron for each proton This arrangement provided a unique opportunity to observe the nucleus of the elements By incorporating the sequential numbers of protons underlying the Energy Levels K L M N O P Q in shell blocks s p d and f of the Group elements it revealed what had been hidden and veiled in the complexity of electron configurations Sequential numbers of protons are observed to repeat in the Group elements from period to period This is the true revealed energy force creating the similar physical and chemical properties of Groups 1 through 18 from period to period in the Periodic Table The ENERGY WAVE of the Periodic Table had revealed Definitive Periodic Law Definitive Periodic Law is the number of protons underlying the Energy Levels K L M N O P Q in the nucleus of the Elements These sequential numbers of protons repeat in shell blocks s p d and f forming groups that have similar physical and chemical properties from period to period These sequential numbers of protons are the cornerstones of the nucleus and provide the atomic orbitals of the electrons the foundation for their spatial relationship to the nucleus as described by the azimuthal angular and magnetic numbers of quantum chemistry These sequential numbers of protons are very important as they reveal new explanation to chemical bond angles and the molecular geometry and structure of molecules The Developement of the Periodic Law Francis Preston Venable,1974
