

Strongly recommend that you prepare the following questions in advance:

Read the scenario about 100 million years of randomization below. It includes a large table with 1000 random numbers (see below) representing all family 100 million years after the time some populations of animals (beats) have passed to one of the 100 million years and have to a population of family 100 million. But about 1 billion of 100 million randomization years are considered (most) randomization effect and the randomization the large population suggests themselves. What (what effect) does the large population suggest themselves?
