Recycled Printer Paper:

Recycled Papers Claudia G. Thompson, 1992 Paper is the largest single component of municipal solid waste and the recycling of paper must be part of any resolution to the current garbage crisis. Because there are no uniform standards for the generic term recycled it is still difficult for paper users to make environmentally responsible purchasing decisions. Myths, misinformation, and confusion abound. This first comprehensive guide to recycled printing and writing papers will therefore be an invaluable resource for anyone involved with printing production design or issues of recycling in general. The book itself printed on four different types of recycled paper is a demonstration of the quality that informed designers and publishers can achieve. In concise nontechnical language, Claudia Thompson explains the dimensions of the solid waste problem, the history of papermaking, the elements of recycled paper production including current definitions and standards, the physical properties and printing characteristics of recycled papers, the potential impact of designers on recycling, and possibilities for the future. *Recycled Papers: The Essential Guide* was sponsored by the American Institute of Graphic Arts under the direction of Claudia Thompson, a graphic designer and Principal of Claudia Thompson Design in Cambridge, Massachusetts. Ms. Thompson's work on environmental issues started with the first Earth Day in 1970 and she has been researching the subject of recycled papers since 1988.

The Green Office Manual Wastebusters Ltd, 2013-11-05 This revised second edition highlights the opportunities for achieving cost savings and environmental improvements to enhance competitiveness in organizations of all sizes with specific guidance for small businesses. The manual sets out effective and simple mechanisms to encourage participation and commitment from both staff and suppliers. It builds on the advice of the first edition with a wide range of new case studies from different sectors including retailers, hotels, and hospitality schools and educational institutions, airports, and prisons, and plenty of office-based examples. A new chapter on environmental reporting considers international developments in environmental management reporting and sustainable business, including the Global Reporting Initiative and the European Environmental Reporting Awards, with a link to DETR guidance. An extended chapter on energy and utilities provides an update on environmental legislation, government position, and industry trends. An office waste chapter looks at examples of successful waste exchanges that save disposal costs to donors and purchase costs to recipients.

Technology of Paper Recycling R. McKinney, 1994-11-30 This book covers the technology of the recovery of secondary fibre for its use in paper and board manufacture. The editor, who has had substantial practical experience of designing and commissioning paper recycling plants all over the world, leads a team of experts who discuss subjects including sourcing, characterisation, mechanical handling and preparation, and de-inking.
