Molina, 2008-09-16 The International Symposium on Distributed Computing and Artificial Intelligence is an annual forum that brings together ideas projects lessons etc associated with distributed computing artificial intelligence and its applications in

different themes This meeting has been held at the University of Salamanca from the 22th to the 24th of October 2008 This symposium has been organized by the Biomedicine Intelligent System and Educational Technology Research Group <http://bisites.usal.es> of the University of Salamanca The technology transfer in this field is still a challenge and for that reason this type of contributions has been specially considered in this edition This conference is the forum in which to present application of innovative techniques to complex problems The artificial intelligence is changing our society Its application in distributed environments such as the Internet electronic commerce mobile communications wireless devices distributed computing and so on is increasing and is becoming an element of high added value and economic potential both industrial and research These technologies are changing constantly as a result of the large research and technical effort being undertaken in both universities and businesses The exchange of ideas between scientists and technicians from both academic and business areas is essential to facilitate the development of systems that meet the demands of today's society

Buying Complex IT Systems Matthew Reynolds, 2024-03-15 Many of us have had experiences of using IT systems at work that just don't work right or cause more problems than they solve Even if we've been lucky at work and always had the opportunity to use well built and functional IT systems it's common to hear in the press or in our day to day lives about IT systems that are down or slow or just do not work right While it can be inconvenient to have to use IT systems that aren't the best for businesses buying an IT system that isn't fit for its intended purpose can have devastating effects on the business itself and the careers of the people involved The senior team of any business will know everything there is to know about their specific business or market but their job is not to implement IT systems This brings an inherent unfairness to IT systems procurement because it makes it very easy to buy the wrong thing at the wrong price In essence the buyers are amateurs but the sellers are professionals This mismatch is at the root of the majority IT systems failures a problem which might cost a company millions of dollars and negatively impact work This book is intended to be a practical manual for senior leaders in small to medium businesses that will teach them how to buy IT systems effectively i.e. to somewhat transform the non IT senior leadership personnel such that they are more informed and capable buyers There are a million and one potholes that can trip up a business even when buying from an otherwise effective and reputable seller and this book looks to make it far more likely that the reader will buy the right system at the right price The author uses his extensive experience to highlight problem areas and offer solutions to eliminate them

Enterprise Architecture with .NET Jean-Philippe Gouigoux, 2024-05-31 Write applications in C# .NET that will stand the test of time evolving with the information systems they belong to and the services they interoperate with by using standards and solid business related architecture rules

Key Features Learn the principles of business aligned software architecture Relate theory to several well known architecture frameworks Apply the knowledge you gain to create a .NET application with a standard based API

Purchase of the print or Kindle book includes a free PDF eBook

Book Description The software development domain continues to grow exponentially and information systems have become the backbone of most industries including non digital native ones However technical debt coupling and a high level of maintenance sometimes bringing IT systems to a complete halt continue to present a problem The software industry has to still apply standards based modular and repeatable approaches that exist in other industries This book demonstrates such methods in action particularly business IT alignment principles As you progress you will cover advanced concepts and theories currently researched in academia Then you will be guided toward a practical framework to transfer these approaches to actual software architecture Finally a dedicated section will help you apply the knowledge you gain to a sample application in .NET where API design dependency management and code writing will be explained in detail to relate to the business alignment principles explained at the beginning Throughout the book you will get equipped with the skills to create modular long living applications that serve your users better By the end of this .NET book you will not only have learned new concepts but also gained the ability to apply them immediately to your upcoming software endeavors

What you will learn Comprehend the main problems in real world software development Understand what business alignment means Create a four layer map of an information system Become proficient in SOLID C4 and domain driven design DDD architecture Get up to speed with semantics APIs and standards for better interoperability Include BPM MDM and BRMS in information systems Design an application with strict responsibility separation

Who this book is for This book is for software architects who want to have an in depth understanding of how their applications will be used and how they can fight technical debt as well as design software to keep it working even when business requirements evolve If your previous software designs experienced progressive loss of performance and the capacity to evolve this book is for you
