Research Methods For Public Administrators Third Edition:

Research Methods for Public Administrators Gail Johnson, 2014-12-17 As in previous editions this highly practical book is written with beginning MPA students and practitioners in mind. It focuses on the interpretation and use of research findings not just number crunching. It covers the entire research process from initial questions to final report in clear jargon free language and includes numerous easy to understand examples and exercises that provide opportunities for concrete applications of the concepts. It is solidly grounded in public administration and recognizes both the promise and limitations of research within a political environment. Key features of the book: It is highly practical and written to accommodate a mix of readers: those who want to become analysts, managers who will oversee research contracts and citizens who need to know whether to believe the facts and data they read in today's news. It minimizes the use of jargon and explains difficult concepts in clear language. Plentiful end of chapter exercises provide opportunities for concrete application of the concepts. Key points are highlighted as takeaway lessons so readers are reminded about what really matters. The tough questions to ask are suggested in every chapter. Examples and applications are used throughout the book to illustrate concepts and add topical interest. It covers the entire research process from initial questions to the final report. This book demystifies and makes practical the research every public administrator and policy analyst needs to do the job well. Online instructor's materials including a Test Bank, PowerPoint slides and a Survey and Documental Analysis SDA guide are also available to adopters.

Research Methods for Public Administrators Gail Johnson, 2002-05-30 Without jargon or mathematical theory to hinder a quick understanding and use, here are the research tools and techniques you can grasp and immediately apply to obtain research services from others or do research yourself. Johnson makes clear that to succeed in any public agency management position you have to be able to think analytically and know how to assess the quality of research results. By providing the underlying concepts and just enough methodology to operationalize them, she gives you exactly what you need in a clear straightforward way that takes the fear out of learning. You will find here an especially wide range of practical guidelines and examples all from the author's own and others' experiences in a variety of settings within the public sector. Throughout her book she emphasizes the how of research: how to do it, how to make sense of its findings and covers all the basic statistical tools concentrating steadily on interpreting research results. An important reader friendly text for students of public administration and for their often perplexed colleagues already on the job. Johnson explains that public administrators do not do research themselves all that often. But with the rising demand for results measurement, balancing scorecards, benchmarking and assessing customer satisfaction they do need to understand the basics of what research is and at least have more than just a glimmer of how it is done. Her book offers both a simple easily grasped presentation of research concepts and principles plus all of the essentials of doing program evaluation, policy analysis and applied social science. It is especially useful as a text in such courses as research methods, program evaluation and introduction to applied statistics.
