

The Construction of Global Warming and the Politics of Science

David Demeritt

Department of Geography, King's College London

Having outlined a theory of heterogeneous social construction, this article describes the scientific construction of climate change as a global-scale environmental problem caused by the universal physical properties of greenhouse gases. Critics have noted that this reductionist formulation serves a variety of political purposes, but instrumental and interest-based critiques of the use of scientific knowledge tend to ignore the ways in which a politics gets built into science at the upstream end. By retracing the history of climate modeling and of several scientific controversies, I unmask the tacit social and epistemic commitments implied by its specific practices. The specific scientific framing of global climate change has reinforced and been reinforced by the technocratic inclinations of global climate management. The social organization of climate change science and its articulation with the political process raise important questions about trust, uncertainty, and expertise. The article concludes with a discussion of the political brittleness of this dominant science-led and global-scale formulation of the climate change problem and the need for a more reflexive politics of climate change and of scientific knowledge based on active trust. *Key Words:* climate change, social constructionism, social studies of science.

In little more than a decade, global warming has been transformed from an obscure technical concern into a subject of widespread public anxiety and international regulatory interest. Only a dozen years separate the World Meteorological Organization's 1985 Villach conference, at which years of previous scientific research and technical debate crystallised into one of the first widely publicized warnings about an anthropogenically enhanced greenhouse effect due to rising concentrations of carbon dioxide (CO₂) and other radiatively sensitive greenhouse gases (GHGs), from the recent Kyoto Protocol to United Nations Framework Convention on Climate Change (UNFCCC), at which politicians hammered out a package of legally binding targets for reducing the GHG emissions of industrialized countries. The speed with which scientific knowledge of climate change has been translated into an international diplomatic consensus is remarkable, if not unprecedented. It is testimony to the authority of science to provide legitimacy for political action.

However, science cannot be given all the credit for spurring the rapid political response to climate change. The 1988 heat wave and drought in North America were arguably as influential in fostering public concern as any of the more formal scientific advice, such as NASA scientist James Hansen's infamous 1988 declaration to Congress that he was "99 percent sure" that global warming was already happening (quoted in Ungar 1992, 491–92; cf. Mazur and Lee 1993). The relationships among

the diverse expert and lay understandings of climate change are complex, as are their connections to climate change politics and policy-formation (Jasanoff and Wynne 1998).

A variety of powerful political interests served as midwives to the birth in the mid- to late 1980s of climate change as a pressing global environmental problem. Since the leading cause of increasing atmospheric GHG concentrations is fossil fuel consumption, which is rapidly increasing worldwide, the politics of climate change are closely intertwined with the politics of energy (Boehmer-Christiansen 1990; Levy and Egan 1998; Newell and Paterson 1998; Rowlands 2000) and the politics of development (Rajan 1997; Grubb, Vrolijk, and Brack 1999; Sachs 1999).

Political analysis has focused primarily on the powerful interests competing to set climate change policy. Political scientists and geographers have charted the fate of local climate change mitigation and energy conservation initiatives (Hinchliffe 1996; Lambright, Changnon, and Harvey 1996; Bulkeley 1997; Collier 1997) and intra-state struggles to fashion coherent national energy and environmental policy responses to global warming (Hatch 1993; O'Riordan and Jager 1996; Sewell 1996; Pleune 1997; Rajan 1997). Students of international relations have studied the geopolitics of negotiating international environmental agreements on climate change (Hecht and Tirpak 1995; Rowlands 1995; Paterson 1996; Yearley 1996; Grubb, Vrolijk, and Brack 1999). Climate Change: Myths and Realities , **The Warming Papers** David Archer,Raymond Pierrehumbert,2013-04-29 Chosen for the 2011 ASLI Choice Honorable Mention History Category for a compendium of the key scientific papers that undergird the global warming forecast Global warming is arguably the defining scientific issue of modern times but it is not widely appreciated that the foundations of our understanding were laid almost two centuries ago with the postulation of a greenhouse effect by Fourier in 1827 The sensitivity of climate to changes in atmospheric CO₂ was first estimated about one century ago and the rise in atmospheric CO₂ concentration was discovered half a century ago The fundamentals of the science underlying the forecast for human induced climate change were being published and debated long before the issue rose to public prominence in the last few decades The Warming Papers is a compendium of the classic scientific papers that constitute the foundation of the global warming forecast The paper trail ranges from Fourier and Arrhenius in the 19th Century to Manabe and Hansen in modern times Archer and Pierrehumbert provide introductions and commentary which places the papers in their context and provide students with tools to develop and extend their understanding of the subject The book captures the excitement and the uncertainty that always exist at the cutting edge of research and is invaluable reading for students of climate science scientists historians of science and others interested in climate change

The Real Global Warming Disaster Christopher Booker,2013-01-31 Booker focuses his attention on the mother of all environmental scares global warming This original book considers one of the most extraordinary scientific and political stories of our time how in the 1980s a handful of scientists came to believe that mankind faced catastrophe from runaway global warming and how today this has persuaded politicians to land us with what promises to be the biggest bill in history Christopher Booker interweaves the science of global warming with that of its growing political consequences showing how just when the politicians are threatening to change our Western way of life beyond recognition the scientific evidence behind the global warming theory is being challenged like never before The book exposes the myth that the global warming theory is supported by a consensus of the world's top climate scientists It shows how the UN's Intergovernmental Panel on Climate Change is run by a small group of

global warming zealots who have repeatedly rigged evidence to support their theory But the politicians pushed by the media have so fallen for its propaganda that short of dramatic change our Western world now faces an unprecedented disaster

Encyclopedia of Global Warming and Climate Change, Second Edition S. George Philander, 2012-06-13 The First Edition of the Encyclopedia of Global Warming and Climate Change provided a multi authored academic yet non technical resource for students and teachers to understand the importance of global warming to appreciate the effects of human activity and greenhouse gases around the world and to learn the history of climate change and the research enterprise examining it This edition was well received with notable reviews Since its publication the debate over the advent of global warming at least partially brought on by human enterprise has continued to ebb and flow depending literally on the weather politics and media coverage of climate summits and debates Advances in research also change the discourse as new data is collected and new scientific projects continue to explore and explain global warming and climate change Thus a new Second Edition updates more than half of the original entries and adds new perspectives and content to keep students and researchers up to date in a field that has proven provocatively lively

Global Warming and Agriculture William R Cline, 2007-07-30 How will global warming affect developing countries which rely heavily on agriculture as a source of economic growth William Cline asserts that developing countries have more at risk such as their production capacity than industrial countries as global warming worsens Using general circulation models Cline boldly examines 2071 99 to forecast the effects of global warming and its economic impact into the next decade This detailed study outlines existing studies on climate change Cline finds the Stern Report for the UK government s estimates most reliable estimates projected changes in temperature precipitation and agricultural capacity and concludes with policy recommendations Cline finds that agricultural production in developing countries may fall an average of 16 percent and if global warming progresses at its current rate India s agricultural capacity could fall as much as 40 percent Thus policymakers should address this phenomenon now before the world s developing countries are adversely and irreversibly affected

The Great Global Warming Blunder Roy W Spencer, 2012-08-28 The Great Global Warming Blunder unveils new evidence from major scientific findings that explode the conventional wisdom on climate change and reshape the global warming debate as we know it Roy W Spencer a former senior NASA climatologist reveals how climate researchers have mistaken cause and effect when analyzing cloud behavior and have been duped by Mother Nature into believing the Earth s climate system is far more sensitive to human activities and carbon dioxide than it really is In fact Spencer presents astonishing new evidence that recent warming is not the fault of humans but the result of chaotic internal natural cycles that have been causing periods of warming and cooling for millennia More carbon dioxide in the atmosphere is not necessarily to be feared The Great Global Warming Blunder explains that burning of fossil fuels may actually be beneficial for life on Earth As group think behavior and misguided global warming policy proposals threaten the lives of millions of the world s poorest most vulnerable citizens The Great Global Warming

Blunder is a scintillating expos and much needed call for debate **Climate Change, Supply Chain Management and Enterprise Adaptation: Implications of Global Warming on the Economy** Pappis, Costas P.,2010-08-31 Mounting scientific evidence shows that Earth s climate is dramatically changing due to the greenhouse emissions caused by human activities notably by burning fossil fuels for energy production and transport Climate Change Supply Chain Management and Enterprise Adaptation Implications of Global Warming on the Economy aims to provide one among many diverse responses to a growing sense of urgency fed by climate change and experienced by international institutions governments local authorities and enterprises It provides an interdisciplinary treatment of issues raised by climate change in connection with its implications for society environment and economy particularly at the company and the supply chain levels Fixing Climate Wallace S. Climatology versus Pseudoscience Dana Nuccitelli, 2015-03-03 This book explains the science of climate change in plain language and shows that the 2 to 4 percent of climate scientists who are skeptical that humans are the main cause of global warming are a fringe minority and have a well established history of being wrong Although some politicians pundits and members of the public do not believe it global warming predictions by mainstream climate scientists have been remarkably accurate while those made by climate deniers have not And if mainstream global warming predictions continue to prove correct the window of opportunity to prevent a climate catastrophe is quickly closing This book is the first to illustrate the accuracy and inaccuracy of global warming predictions made by mainstream climate scientists and by climate contrarians from the 1970s to the present day Written in simple non technical language that provides an accessible explanation of key climate science concepts the book will appeal to general audiences without previous knowledge about climate science Author Dana Nuccitelli an environmental scientist and risk assessor discusses some key climate discoveries dating back to the 19th century and debunks myths such as the idea that climate scientists and climate models have grossly over predicted global warming He addresses recent findings of a 97 percent consensus in the peer reviewed scientific literature that humans are causing global warming a nearly unanimous agreement that formed in the early 1990s and has grown through the present day Nuccitelli also discusses what the future climate might look like if current trends continue unabated and what we as a global society need to do to prevent a climate catastrophe
