

Natural Disasters: Tornadoes, Earthquakes, and Hurricanes

✓ Exclusively available on IvyPanda

Introduction

The world witnessed several natural disasters that claim millions and millions of human lives every year. Natural disasters such as volcanic eruption, earthquake and tornadoes are the result of a natural hazard which generally moves from potential into an active phase. This may result in serious damages and affects human activities. Additionally, if there is no proper planning and preparedness, it may lead to human vulnerability, leads financial, structural, and human losses. Hence the loss may depend on the population of the area affected and also the capacity of the population to support or resist the disaster (Bankoff et al. 5-356). Disasters such as floods, hurricanes, tornadoes, and earthquakes can occur in almost any part of the world. However, with the present scientific advancement, it is possible to predict to a certain extent the risk-prone areas. Therefore it is a good idea to prepare for them (Torrence, and Grattan, 2002).

There is a difference between the harm caused in developed and developing nations due to natural disasters. The developed nations are well equipped to face these disasters when compared to developing nations of the world. A comparison of Natural disasters in developed and developing countries show that the injury and death rates can be up to 100 times higher in the poorer developing countries. This happens because of the financial constraints and the poor living conditions in developing nations (World Bank 1-4). This paper intends to describe three natural disasters (Tornadoes, Earthquakes and Hurricanes) that have claimed several lives and economical damages.

Tornadoes

A tornado is defined as a violently rotating column of air that is in contact with both a cumulonimbus (or, in rare cases, a cumulus) cloud base and the surface of the earth. Tornadoes are of many sizes, however, these are normally in the form of a visible condensation funnel, with the narrow end touching the earth and the broader end

Hurricanes and Typhoons Richard J. Murnane,Kam-biu Liu,2004-12-01 This book surveys the past present and potential future variability of hurricanes and typhoons on a variety of timescales using newly developed approaches based on geological and archival records in addition to more traditional approaches based on the analysis of the historical record of tropical cyclone tracks A unique aspect of the book is that it provides an overview of the developing field of paleotempestology which uses geological biological and documentary evidence to reconstruct prehistoric changes in hurricane landfall The book also presents a particularly wide sampling of ongoing efforts to extend the best track data sets using historical material from many sources including Chinese archives British naval logbooks Spanish colonial records and early diaries from South Carolina The book will be of particular interest to tropical meteorologists geologists and climatologists as well as to the catastrophe reinsurance industry graduate students in meteorology and public employees active in planning and emergency management **Climate Variability and Ecosystem Response at Long-Term**

Ecological Research Sites David Greenland,Douglas G. Goodin,Raymond C. Smith,2003-10-09 This volume in the Long Term Ecological Research Network Series would present the work that has been done and the understanding and database that have been developed by work on climate change done at all the LTER sites Global climate change is a central issue facing the world which is being worked on by a very large number of scientists across a wide range of fields The LTER sites hold some of the best available data measuring long term impacts and changes in the environment and the research done at these sites has not previously been made widely available to the broader climate change research community This book should appeal reasonably widely outside the ecological community and because it pulls together information from all 20 research sites it should capture the interest of virtually the entire LTER research community Technical Report - Air Weather Service United States. Air Weather Service,1971 **Hurricanes** Paul V. Kislow,2008 A hurricane is a tropical storm with winds that have reached a constant speed of 74 miles per hour or more Hurricane winds blow in a large spiral around a relative calm centre known as the eye The eye is generally 20 to 30 miles wide and the storm may extend outward 400 miles As a hurricane approaches the skies will begin to darken and winds will grow in strength As a hurricane nears land it can bring torrential rains high winds and storm surges A single hurricane can last for more than 2 weeks over open waters and can run a path across the entire length of the eastern seaboard August and September are peak months during the hurricane season that lasts from 1 June to 30 November This book presents the facts and history of hurricanes **Research**

Elsner,Thomas H. Jagger,2010-01-23 Recent studies suggest that tropical cyclones are more powerful than in the past with the most dramatic increase in the North Atlantic The increase is correlated with an increase in ocean temperature A debate concerns the nature of these increases with some scientists attributing them to a natural climate fluctuation and others suggesting climate change related to anthropogenic increases in forcing from greenhouse gases A Summit on Hurricanes and Climate Change was held during the spring of 2007 on the island of Crete that brought together leading academics and researchers on both sides of the scientific debate to discuss new research and express opinions about what will happen in the future with regard to hurricane activity This proceedings volume highlights the state of the science research into various aspects of the hurricane climate connection It is likely that the science presented here will lead to new research that will help answer crucial questions about our sustainable future *Scientific and Technical Aerospace Reports* ,1995 On the Scales of Motion and Internal Stress Characteristics of the Hurricane William M.
