

How to Write a Research Question

What is a research question?

A research question is the question around which you center your research. It should be:

- **clear:** it provides enough specifics that one's audience can easily understand its purpose without needing additional explanation.
- **focused:** it is narrow enough that it can be answered thoroughly in the space the writing task allows.
- **concise:** it is expressed in the fewest possible words.
- **complex:** it is not answerable with a simple "yes" or "no," but rather requires synthesis and analysis of ideas and sources prior to composition of an answer.
- **arguable:** its potential answers are open to debate rather than accepted facts.

You should ask a question about an issue that you are genuinely curious and/or passionate about.

The question you ask should be developed for the discipline you are studying. A question appropriate for Biology, for instance, is different from an appropriate one in Political Science or Sociology. If you are developing your question for a course other than first-year composition, you may want to discuss your ideas for a research question with your professor.

Why is a research question essential to the research process?

Research questions help writers focus their research by providing a path through the research and writing process. The specificity of a well-developed research question helps writers avoid the "all-about" paper and work toward supporting a specific, arguable thesis.

Steps to developing a research question:

1. *Choose an interesting general topic.* Most professional researchers focus on topics they are genuinely interested in studying. Writers should choose a broad topic about which they genuinely would like to know more. An example of a general topic might be "Slavery in the American South" or "Films of the 1930s."
2. *Do some preliminary research on your general topic.* Do a few quick searches in current periodicals and journals on your topic to see what's already been done and to help you narrow your focus. What issues are scholars and researchers discussing, when it comes to your topic? What questions occur to you as you read these articles?
3. *Consider your audience.* For most college papers, your audience will be academic, but always keep your audience in mind when narrowing your topic and developing your question. Would that particular audience be interested in the question you are developing?
4. *Start asking questions.* Taking into consideration all of the above, start asking yourself open-ended "how" and "why" questions about your general topic. For example, "Why were slave narratives effective tools in working toward the abolishment of slavery?" or "How did the films of the 1930s reflect or respond to the conditions of the Great Depression?"
