President, 1999 Reports for 2002 include The Annual report of the Council of Economic Advisers **Sovereign Wealth Funds** Edwin M. Truman, 2010 This study examines the role of sovereign wealth funds SWFs in the global economy and financial system Sovereign wealth funds are not a new phenomenon in international finance Governments of a few countries have used similar entities to manage their international financial assets for several decades Moreover countries have always held international reserves and government owned entities have made cross border investments for many years Sovereign wealth funds or their equivalent pose profound issues for the countries that own them with respect to macroeconomic policy and the potential for corruption They also raise issues for countries that receive SWF investments as well as for the international financial system as a whole because government ownership introduces potential political and economic power issues into the management of these cross border assets This study traces the origins of SWFs It describes the issues raised by these large governmental holdings of cross border assets for the countries that own them for the host countries and for the international financial system The study lays out what is known about the 50 plus SWFs of various countries Some countries have more than one such entity and a sample of government managed pension funds is included in this analysis because they raise most of the same basic policy issues Using publicly available information that is provided on a systematic basis the author has previously developed a scoreboard for these funds involving a number of elements grouped in four categories structure governance transparency and accountability and behavioral rules The 2008 edition contributed to the development of a set of generally accepted principles and practices the Santiago Principles for SWFs by the International Working Group operating under the auspices

of the International Monetary Fund This publication presents an updated scoreboard for an expanded list of funds evaluates the Santiago Principles and examines current compliance with those principles The study also examines the policies of recipient countries and the role of the Organization for Economic Cooperation and Development OECD investment codes Finally the study discusses the evolving role of SWFs in the context of the global economic and financial crisis and its aftermath and will make recommendations for the policies of countries both managing such funds and those that expect to receive investments from them in the future

International Financial Contagion Stijn Claessens, Kirsten Forbes, 2013-04-17 No sooner had the Asian crisis broken out in 1997 than the witch hunt started With great indignation every Asian economy pointed fingers They were innocent bystanders The fundamental reason for the crisis was this or that most prominently contagion but also the decline in exports of the new commodities high tech goods the steep rise of the dollar speculators etc The prominent question of course is whether contagion could really have been the key factor and if so what are the channels and mechanisms through which it operated in such a powerful manner

The question is obvious because until 1997 Asia's economies were generally believed to be immensely successful stable and well managed This question is of great importance not only in understanding just what happened but also in shaping policies In a world of pure contagion i.e. when innocent bystanders are caught up and trampled by events not of their making and when consequences go far beyond ordinary international shocks countries will need to look for better protective policies in the future In such a world the international financial system will need to change in order to offer better preventive and reactive policy measures to help avoid or at least contain financial crises

Cross-Country and Cross-Sector Analysis of Transparency of Monetary and Financial Policies International Monetary Fund, 2003-05-01 In this paper we construct

indices of transparency of monetary and financial policies based on self evaluations carried out by 135 IMF member countries in 1999 and use them to identify transparency patterns across different policies and country groups We find that across all countries transparency is highest in the formulation and conduct of monetary policy and lowest in insurance supervision and deposit insurance oversight Across country groups having similar political economic characteristics the average degree of transparency is highest in advanced countries and lowest in developing ones for both monetary policy and those financial policies for which there are differences between country group means
