Access 2007 VBA Programmer's Reference covers a wide spectrum of programming topics relevant to Access. The book also discusses how to create and name variables, how to use Data Access Object (DAO) and ActiveX Data Object (ADO) to manipulate data both within Access and within other applications, proper error handling techniques and advanced functions such as creating classes and using APIs. Key new objects such as using Macros and the Ribbon are explored too as are forms and reports, the two most powerful tools for working with and displaying data. Working with other applications is covered extensively both in a general nature and for working specifically with Microsoft Office applications, Windows SharePoint Services and SQL Server.
