How the World Will Change with Global Warming Trausti Valsson, 2006 Hotter summers and milder winters have already made most of us aware of what scientists say is a trend towards extensive global warming Most of the experts accompany their predictions with dire warnings of the resulting rising sea levels and spreading deserts Trausti Valsson's approach to the problem of global warming is a refreshing look at the advantages that will ensue With the melting of the sea ice in the north shipping routes will regularly include the passage north of Siberia and slightly later a north west passage through the Canadian Archipelago This means that countries bordering the Pacific and Atlantic Oceans will become closer to each other and that ships too wide for the Panama and Suez Canals can easily transport oil and other cargoes via the shorter routes over the Arctic Ocean The warming climate and melting ice will make oil and mineral resources in northern areas easily accessible for exploitation and will make the far north comfortable for human habitation replacing the living spaces around the central areas of the globe that will become too hot for habitation Valsson recognizes the fact that the world's climate has changed many times in the past and that the present warming trend is not new However he underlines the importance of the international agreements for reducing greenhouse gas emissions which are largely to blame for the current warming trend He also promotes the view that even in the face of the very many negative consequences we need to maintain a positive attitude towards the changes that are coming upon us a refreshing view which he presents through text and a wealth of informative maps

The Impact of Global Warming on Texas Gerald R. Environmental Regulations and Global Warming Paul Ruschmann, 2009 When the 2007 Nobel Peace Prize went to former Vice President Al Gore and an international scientific body that warned of serious consequences if Earth's temperatures continue to rise the award underscored the international concern about the Earth's changing climate Most scientists agree that global warming is a serious threat and that human beings contribute to it by burning carbon containing fuels such as oil and coal and the international community has moved to limit carbon emissions However some scientists dispute the link between greenhouse gases and global warming Many prominent Americans including members of Congress object to putting limits on carbon emissions arguing that the evidence of warming is still uncertain and cutting emissions would cripple the economy while doing little to curb global warming
