Technology Assessment of Assistance Dogs and Dog-Assisted Interventions Martina Lundqvist, 2020-09-04 Dogs as an

assistive aid for people with disabilities date as far back in time as the first century CE Today dogs are used in various settings to help and assist humans Assistance dogs is an umbrella term for guide dogs hearing dogs and service dogs They are custom trained to help and support their owners in their everyday life and thereby give them greater independence Dogs who perform dog assisted interventions are another type of working dog where the dog and the owner work together as a team visiting people with various needs in different settings such as hospitals and nursing homes These visits aim to strengthen people s inner motivation using the dog as an external motivator There is a lack of evaluations of working dogs in the health technology assessment context and in the health economic evaluation context Hence there is a need for structured analyses that include both the short and long term effects and the costs of assistance dogs and dog assisted interventions The overall aim of this thesis is to explore and assess the use of assistance dogs and dog assisted interventions The research questions were investigated using a variety of methods In paper I inferential statistical analysis was used to analyse patient reported outcomes measures In paper II a thematic content analysis was employed to explore the experiences of service and hearing dogs To study the long term cost effectiveness of physical service dogs and diabetes alert dogs a decision analytic model was used in paper III The input data in studies I II and III was obtained from the Service and Hearing Dog Project In paper III the data was also supplemented with information from published literature and expert opinions Paper IV investigated the effects and cost effectiveness of dog assisted interventions and takes the form of a systematic review Paper I showed that a service or hearing dog may have positive impact on its owner s health related quality of life well being and activity level Paper II showed that owners of service or hearing dogs experienced both positive physical and psychosocial effects from their dog Negative experiences were also identified for example being denied access to public places and negative attitudes from other people Paper III showed that physical service dogs and diabetes alert dogs are cost effective in comparison with regular companion dogs resulting in both lower costs and a gain in QALYs The one way sensitivity analysis did not change the results but the probabilistic sensitivity analysis showed that the results were uncertain Synthesizing the results from the review in paper IV showed that dog assisted interventions for therapeutic purposes led to minor to moderate effects in psychiatric conditions Dog assisted interventions as an activity had minor to moderate effects on cognitive disorders and dog assisted interventions for support purposes were beneficial in different types of medical interventions Studies of cost effectiveness were lacking To conclude assistance dogs are valuable and may be cost effective for use as assistive aids and dog assisted interventions render minor to moderate effects in certain situations in healthcare settings
