Mixed Methods Research Outside the Box Joseph A. Maxwell, 2024-11-22. In *Mixed Methods Research Outside the Box*, Joseph A. Maxwell shows readers how to carry out unconventional yet effective mixed methods research. Providing a new way to think about and combine qualitative and quantitative research, this readable text takes a broad view of mixed methods, revealing the largely unrecognized early history of mixed methods research and its current diversity across disciplines. Maxwell brings together work on combining qualitative and quantitative methods from a variety of disciplines and puts them in conversation with one another. He identifies mixed methods philosophical bases, presenting an interactive model of design that more closely integrates qualitative and quantitative elements and emphasizes the complementarity of qualitative and quantitative methods for understanding causation and generalization. Drawing from recent works on causation, integration, and philosophy of science, this text promotes innovations in mixed methods such as process tracing in political science and design-based research in education. This groundbreaking book provides readers with a new way of thinking about developing and conducting mixed methods research.

Handbook of Research Methods in Cardiovascular Behavioral Medicine Neil Schneiderman, Stephen M. Weiss, Peter G. Kaufmann, 2013-11-21. Cardiovascular disease continues to be the number one cause of death in the United States. Behavioral medicine was developed and shaped into the one source of morbidity and mortality in our country following the definition of the term. Despite a 35% reduction since 1964, cardiovascular disease remains the leading cause of death in the United States. Behavioral medicine is the interdisciplinary field concerned with the development and integration of behavioral and biomedical science knowledge and techniques. The United States has lost nearly 1,000,000 lives each year in cardiovascular and biomedical science. Knowledge and techniques from the United States have been applied to the understanding of health and illness, and the Framingham study among others has identified the application of this knowledge and these techniques to prevention, diagnosis, treatment, and rehabilitation. Three major risk factors implicated in the development of CHD are smoking, elevated serum cholesterol, and high blood pressure. Castelli et al. (1978) developed the concept of biobehavioral collaboration. Given that these factors account for less than 50% of the variance associated with CHD, scientists and clinicians of many disciplines need to consider how they might more effectively collaborate. Jenkins (1976) has become
