Digital

Representations of Student Performance for Assessment P. John Williams, C. Paul Newhouse, 2013-10-30 It was the belief that assessment is the driving force of curriculum that motivated the authors of this monograph to embark on a program of research and development into the use of digital technologies to support more authentic forms of assessment They perceived that in responding to the educational needs of children in the 21st Century curriculum needed to become more relevant and engaging but that change was unlikely without commensurate change in methods and forms of assessment This was particularly true for the high stakes assessment typically conducted at the conclusion of schooling as this tended to become the focus of the implemented curriculum throughout the years of school Therefore the authors chose to focus on this area of assessment with the understanding that this would inform assessment policy and practices generally in schools This book provides a conceptual framework and outlines a project in which digital methods of representing students performance were developed and tested in the subject areas of Applied Information Technology Engineering Italian and Physical Education The methodology and data collection processes are discussed and the data is analysed providing the basis for conclusions and recommendations

The Global Cybercrime Industry Nir Kshetri, 2010-06-25 The Internet's rapid diffusion and digitization of economic activities have led to the emergence of a new breed of criminals Economic political and social impacts of these cyber criminals activities have received considerable attention in recent years Individuals businesses and governments rightfully worry about the security of their systems networks and IT infrastructures Looking at the patterns of cybercrimes it is apparent that many underlying assumptions about crimes are awed unrealistic and implausible to explain this new form of criminality The empirical records regarding crime patterns and strategies to avoid and fight crimes run counter to the functioning of the cyberworld The fields of hacking and cybercrime have also undergone political social and psychological metamorphosis The cybercrime industry is a comparatively young area of inquiry While there has been an agreement that the global cybercrime industry is tremendously huge little is known about its exact size and structure Very few published studies have examined economic and institutional factors that influence strategies and behaviors

of various actors associated with the cybercrime industry Theorists are also debating as to the best way to comprehend the actions of cyber criminals and hackers and the symbiotic relationships they have with various players
