

The Impact of Social Media on Youth Mental Health: Challenges and Opportunities

Jacqueline Nesi

The technology landscape has rapidly evolved in recent years, with social media now playing a central role in the lives of youth. Social media has created both significant new challenges and exciting opportunities. Research is beginning to uncover how specific social media experiences may influence youth mental health.

Digital technologies have become a universal feature of young people's lives. Exposure to screens begins early in life for many youth, with US children under age two spending an average of 42 minutes per day with screen media [1]. By the time youth reach adolescence, most are fully immersed in a world of smartphones, computers, and social media. Recent nationally representative statistics suggest that 95% of adolescents aged 13-18 have access to a smartphone and 88% have access to a desktop or laptop at home [2]. In 2018, 45% of US adolescents reported that they were online "almost constantly," up from 24% only three years prior [2]. The pervasiveness of new media has created an increasingly complex environment for youth, parents, health care providers, and policymakers to navigate. Indeed, while this media environment has introduced numerous new challenges and risks for youth mental health, so too has it presented considerable benefits and opportunities.

Adolescence and the Media Landscape

Today's media landscape is larger and more diverse than ever before, with youth having access to an unprecedented volume of digital content across numerous devices, including smartphones, tablets, computers, laptops, and gaming consoles. Social media represents a central component of this landscape. Broadly, social media is defined as any digital tools or applications that allow users to interact socially [3], and can be distinguished from traditional media (eg, television) by the fact that users can both consume and create content. Under this broad definition, "social media" may include social networking sites (eg, Instagram, Snapchat, Facebook, TikTok), text messaging and messaging apps, social gaming tools, YouTube, and more. Any comprehensive understanding of contemporary adolescents' mental health requires a consideration of the role of social media.

Adolescence represents a period of heightened risk for the onset of mental illness, with nearly 1 in 5 adolescents suffering from a diagnosable mental disorder [4]. Notably, the incidence of certain mental health concerns, such as depression [5] and suicide [6], have increased significantly among adolescents in recent years, with rates of suicide among youth aged 10-24 increasing 56% from 2007 to 2017 [6]. Given that this increase has coincided with the widespread adoption of social media, this has led to concerns regarding a potential link. In addition, technology use tends to increase over the course of childhood, with adolescents using new media, and social media in particular, at higher rates and with greater frequency than younger children [7]. Nearly all adolescents aged 13-17 use some form of social media, with the most popular sites currently being YouTube (85%), Instagram (72%), Snapchat (69%), and Facebook (51%) [2]; however, new platforms are frequently introduced, with some (ie, TikTok), quickly gaining traction among young people.

Furthermore, social media may uniquely appeal to adolescents given the characteristics of this developmental period, making teens particularly susceptible to both the opportunities and risks of new technologies. During adolescence, rapid development of the brain's socioaffective circuitry may heighten sensitivity to social information, increasing the drive for social rewards and concern over peer evaluation [8]. Important developmental tasks of adolescence include the establishment of intimate peer relationships, increasing independence from adults, and the exploration of identity [9]. Social media offers a prime context for navigating these tasks in new, increasingly complex ways: peers are constantly available, personal information is displayed publicly and permanently, and quantifiable peer feedback is instantaneously provided in the form of "likes" and "views" [10].

The Psychology of Social Networking Vol.1 Giuseppe Riva,Brenda K. Wiederhold,Pietro Cipresso,2015-01-01 Using a novel approach to consider the available literature and research this book focuses on the psychology of social media based on the assumption that the experience of being in a social media has an impact on both our identity and social relationships In order to be online an individual has to create an online presence they have to share information about themselves online This online self is

presented in different ways with diverse goals and aims in order to engage in different social media activities and to achieve desired outcomes Whilst this may not be a real physical presence that physicality is becoming increasingly replicated through photos video and ever evolving ways of defining and describing the self online Moreover individuals are using both PC based and mobile based social media as well as increasingly making use of photo and video editing tools to carefully craft and manipulate their online self This book therefore explores current debates in Cyberpsychology drawing on the most up to date theories and research to explore four main aspects of the social media experience communication identity presence and relationships In doing so it considers the interplay of different areas of psychological research with current technological and security insight into how individuals create manipulate and maintain their online identity and relationships The social media are therefore at the core of every chapter with the common thread throughout being the very unique approach to considering diverse and varied online behaviours that may not have been thus far considered from this perspective It covers a broad range of both positive and negative behaviours that have now become integrated into the daily lives of many westernised country s Internet users giving it an appeal to both scholarly and industry readers alike

Information Literacy Skills and the Role of Social Media in Disseminating Scholarly Information in the 21st Century Baskaran, C.,Dhanavandan, S.,2023-06-29

The storage of information lies within the basic components called binary devices and at present storage media falls into two categories random and serial or sequential access which require different amounts of time to access a given piece of data The typical serial access medium is magnetic tape which has a storage density that has increased considerably over the years Vast quantities of source data are collected digitized and compressed automatically by means of unique instruments in fields such as astronomy environmental monitoring scientific experimentation and modelling and national security Information capture that is generated by an individual in the form of packages of symbols called documents is accomplished by manual and increasingly automatic techniques Data that is entered into instruments manually such as keyboard strikes is a process that is comparatively slow and error prone and often requires the use of computer programs with supporting editing software for formatting grammar spelling and more With the evolution of technology and its impact on human society the social sciences have begun to describe this new version of society as a post industrial or the information knowledge society Such terms attempt to capture the unprecedented development and use of information and communication technologies and the fact that information generation processing and transmission have become the fundamental sources of productivity and power An exploration into the impacts of the modern knowledge society on the ways in which academic researchers utilize distribute and record data from their fields of study is necessary for further comprehension protection and maintenance of this ever expanding body of information
