Abstract

Technology has become an important component of language learning both in and out of the classroom. English language learning classes primarily employ a variety of technologies to enhance and assist the learning process. Using technology has become an increasingly important tool for teachers to facilitate students' language learning. Very few educational institutions in our country are making effective use of technology to teach English language. However, this study investigates whether the inclusion of technology in English language classrooms in secondary schools significantly changes student participation, attitudes, and motivation. This study will follow qualitative research method and interview and focus group discussion will be used to collect data from 50 secondary school students and 10 teachers in urban and rural areas. This study will attempt to show that skilled teachers favor the inclusion of technology in the English language classroom and that students are more spontaneous, attentive, and cooperative in technologically enhanced classrooms. However, teachers and students face challenges in using technology for a variety of reasons. This study would recommend that school authorities train teachers in the use of technology-based materials, to be able to create a productive and encouraging classroom for students.

Subcommittee on Telecommunications and the Internet, 2001 *Resources in Education*, 2001-10 **2000 Research Report on the Effectiveness of Technology in Schools** Jay P. Sivin, Ellen R. Bialo, 2000 **Methods of Evaluating Educational Technology** Walt Heinecke, Laura Blasi, 2001-09-01 This volume gathers some of the methods being developed by evaluators from university settings and the private sector While providing models and methods these authors also raise larger questions such as How can schools meet the challenge of educating all children without being limited by the educational legacy of a one size fits all curriculum and normative testing More than documenting an apprenticeship to gadgetry evaluators are seeking to measure meaningful learning and changes in teaching investigating approaches that are not possible or that are less accessible when students are in traditional classrooms without technology In this first volume of the series Research Methods for Educational Technology RMET the contributing authors draw upon examples of their work evaluating the implementation and development of educational technology as well as the impact of policies and programs in this field Within this volume several authors have written about the implementation and evaluation of technology across cultures and national boundaries pointing to an area of research that will rapidly expand in this decade The concern for meeting the needs of policymakers is also apparent in several of these chapters but there is tension between providing them with positive results to support their efforts and reexamining the questions they are asking and how these questions are developed We know that evaluation is not the extended arm of public relations and yet it becomes clear that evaluators are often asked to demonstrate a project is successful on the threat that the funding will be cut While this decision making process fits the timetable of the fiscal year it does not acknowledge that evaluation can be formative and strengthen programs This timetable also ignores the investment of time that is needed when implementing innovations like the Internet into teaching and learning Many of the authors included in this volume write from the context of evaluating federally funded programs and they provide valuable insight for future projects which are created and evaluated at the state level As technology initiatives are developed and funded outside of the federal arena more evaluators will be called upon From approaches developed from federally funded projects we can build upon these methods and models for evaluation within regional projects to answer questions related to budgets and accountability As we answer these immediate questions we can move forward to examine the long term impact of technology and the possibility that exercises in conformity will replace the adventure of human enlightenment for our children *Research in Education*, 1974 *Effective*
