

If your heat pump has quit cooling, here are some specific and detailed reasons along with troubleshooting steps: ## Thermostat Issues - Check if the thermostat is set to cooling mode and the temperature is set at least 2 degrees below the current room temperature. Ensure it has power; replace batteries if necessary, or check the circuit breaker for hardwired units[1][2][5]. ## Power and Electrical Issues - Verify that both the indoor and outdoor units are turned on. Check the circuit breaker or fuse panel to ensure no breakers have tripped or fuses have blown[1][3][4]. ## Air Filter and Vents - A clogged air filter can restrict airflow and prevent the system from cooling.
