

The SP845 replaces the SP745 in this 780-002 (lockout) kit. The SP845 ignition control module incorporates microprocessor technology and replaces the SP745 in fit, form and function in most applications. The SP845 includes a diagnostic LED display to assist in trouble-shooting the module. Please review the differences in the SP845 and SP745 units to confirm its proper use.

The SP845 lockout ignition control provides 90 seconds of spark, followed by a 5 minute time delay (purge) between ignition attempts. After three tries, if no pilot flame is sensed, the SP845 goes into a one-hour lockout period. At the end of the lockout period, if the demand for heat is still present, the unit will repeat the three tries for ignition.

**Note:** During lockout, you may override the auto-system, and manually reset the unit at the thermostat.

#### NOTE ON SENSOR TERMINAL AND FLYING LEAD WIRE

If a remote sensor is present from a previous installation, attach the remaining wire from the old board to the 1/4" sensor terminal labeled REMOTE SENSE. Leave the flying lead wire alone.

If the flame sensing mechanism is a LOCAL sense, attach the black flying lead wire to the 1/4" sensing terminal labeled REMOTE SENSE. This will complete the circuit so the ignition module senses flame from a local sensor.
