"PLANT-PC" Bijan Payandeh,Canada-Ontario Forest Resource Development Agreement,1992 The simulation model PLANT PC was developed to aid forest managers in Ontario with their forest renewal problems The model treats the regeneration process as three separate but interdependent phases of stock production stock storage and plantation establishment During each phase growth and or survival of seedlings are simulated according to empirical submodels reflecting the effects of various biological factors as well as management options The model was calibrated for black spruce white spruce and jack pine plantations from the Nipigon Geraldton Hearst Kapuskasing Timmins and Wawa districts of Ontario Application of the model is demonstrated by presenting a detailed example A simple procedure for calibrating the model to account for local or regional conditions is also provided

Enabling the Internet of Things Massimo Alioto,2017-01-23 This book offers the first comprehensive view on integrated circuit and system design for the Internet of Things IoT and in particular for the tiny nodes at its edge The authors provide a fresh perspective on how the IoT will evolve based on recent and foreseeable trends in the semiconductor industry highlighting the key challenges as well as the opportunities for circuit and system innovation to address them This book describes what the IoT really means from the design point of view and how the constraints imposed by applications translate into integrated circuit requirements and design guidelines Chapter contributions equally come from industry and academia After providing a system perspective on IoT nodes this book focuses on state of the art design techniques for IoT applications encompassing the fundamental sub systems encountered in Systems on Chip for IoT ultra low power digital architectures and circuits low and zero leakage memories including emerging technologies circuits for hardware security and authentication System on Chip design methodologies on chip power management and energy

harvesting ultra low power analog interfaces and analog digital conversion short range radios miniaturized battery technologies packaging and assembly of IoT integrated systems on silicon and non silicon substrates As a common thread all chapters conclude with a prospective view on the foreseeable evolution of the related technologies for IoT The concepts developed throughout the book are exemplified by two IoT node system demonstrations from industry The unique balance between breadth and depth of this book enables expert readers quickly to develop an understanding of the specific challenges and state of the art solutions for IoT as well as their evolution in the foreseeable future provides non experts with a comprehensive introduction to integrated circuit design for IoT and serves as an excellent starting point for further learning thanks to the broad coverage of topics and selected references makes it very well suited for practicing engineers and scientists working in the hardware and chip design for IoT and as textbook for senior undergraduate graduate and postgraduate students familiar with analog and digital circuits

Conference on Tax Administration Research, January 1985: Proceedings, 1985 Cosmic Rays at Earth P.K.F. Grieder, 2001-07-27 In 1912 Victor Franz Hess made the revolutionary discovery that ionizing radiation is incident upon the Earth from outer space He showed with ground based and balloon borne detectors that the intensity of the radiation did not change significantly between day and night Consequently the sun could not be regarded as the sources of this radiation and the question of its origin remained unanswered Today almost one hundred years later the question of the origin of the cosmic radiation still remains a mystery Hess discovery has given an enormous impetus to large areas of science in particular to physics and has played a major role in the formation of our current understanding of universal evolution For example the development of new fields of research such as elementary particle physics modern astrophysics and cosmology are direct consequences of this discovery Over the years the field of cosmic ray research has evolved in various directions Firstly the field of particle physics that was initiated by the discovery of many so called elementary particles in the cosmic radiation There is a strong trend from the accelerator physics community to reenter the field of cosmic ray physics now under the name of astroparticle physics Secondly an important branch of cosmic ray physics that has rapidly evolved in conjunction with space exploration concerns the low energy portion of the cosmic ray spectrum Thirdly the branch of research that is concerned with the origin acceleration and propagation of the cosmic radiation represents a great challenge for astrophysics astronomy and cosmology Presently very popular fields of research have rapidly evolved such as high energy gamma ray and neutrino astronomy In addition high energy neutrino astronomy may soon initiate as a likely spin off neutrino tomography of the Earth and thus open a unique new branch of geophysical research of the interior of the Earth Finally of considerable interest are the biological and medical aspects of the cosmic radiation because of its ionizing character and the inevitable irradiation to which we are exposed This book is a reference manual for researchers and students of cosmic ray physics and associated fields and phenomena It is not intended to be a tutorial However the book contains an adequate amount of background materials that its content should be useful to

a broad community of scientists and professionals The present book contains chiefly a data collection in compact form that covers the cosmic radiation in the vicinity of the Earth in the Earth's atmosphere at sea level and underground Included are predominantly experimental but also theoretical data In addition the book contains related data definitions and important relations The aim of this book is to offer the reader in a single volume a readily available comprehensive set of data that will save him the need of frequent time consuming literature searches

Using Neurophysiological Signals that Reflect Cognitive or Affective State Anne-Marie Brouwer, Thorsten O. Zander, Jan B. F. van Erp, 2015-07-27 What can we learn from spontaneously occurring brain and other physiological signals about an individual's cognitive and affective state and how can we make use of this information One line of research that is actively involved with this question is Passive Brain Computer Interfaces BCI To date most BCIs are aimed at assisting patients for whom brain signals could form an alternative output channel as opposed to more common human output channels like speech and moving the hands However brain signals possibly in combination with other physiological signals also form an output channel above and beyond the more usual ones they can potentially provide continuous online information about an individual's cognitive and affective state without the need of conscious or effortful communication The provided information could be used in a number of ways Examples include monitoring cognitive workload through EEG and skin conductance for adaptive automation or using ERPs in response to errors to correct for a behavioral response While Passive BCIs make use of online neurophysiological responses and close the interaction cycle between a user and a computer system neurophysiological responses can also be used in an offline fashion Examples of this include detecting amygdala responses for neuromarketing and measuring EEG and pupil dilation as indicators of mental effort for optimizing information systems The described field of applied neurophysiology can strongly benefit from high quality scientific studies that control for confounding factors and use proper comparison conditions Another area of relevance is ethics ranging from dubious product claims acceptance of the technology by the general public privacy of users to possible effects that these kinds of applications may have on society as a whole In this Research Topic we aimed to publish studies of the highest scientific quality that are directed towards applications that utilize spontaneously effortlessly generated neurophysiological signals brain and or other physiological signals reflecting cognitive or affective state We especially welcomed studies that describe specific real world applications demonstrating a significant benefit compared to standard applications We also invited original new kinds of proposed applications in this area as well as comprehensive review articles that point out what is and what is not possible according to scientific standards in this field Finally we welcomed manuscripts on the ethical issues that are involved Connected to the Research Topic was a workshop held on June 6 during the Fifth International Brain Computer Interface Meeting June 3-7 2013 Asilomar California that brought together a diverse group of people who were working in this field We discussed the state of the art and formulated major challenges as reflected in the first paper of the Research Topic

Advances in Grid Computing Zoran Constantinescu, 2011-02-28 This book approaches the grid computing with a perspective on the latest achievements in the field providing an insight into the current research trends and advances and presenting a large range of innovative research papers The topics covered in this book include resource and data management grid architectures and development and grid enabled applications New ideas employing heuristic methods from swarm intelligence or genetic algorithm and quantum encryption are considered in order to explain two main aspects of grid

computing resource management and data management The book addresses also some aspects of grid computing that regard architecture and development and includes a diverse range of applications for grid computing including possible human grid computing system simulation of the fusion reaction ubiquitous healthcare service provisioning and complex water systems
