*Surface Segregation phenomena* Peter A. Dowben, Allen Miller, 2025-12-20 The purpose of this book is to discuss the phenomena associated with the segregation of one element in a multicomponent material It describes the kinetics of segregation and contains a tabular summary of the pros and cons of the various models The easy to read chapters outline in detail the macroscopic approach and provide an in depth review of broken bond models This comprehensive informative resource also addresses important multicomponent systems These systems include metals with non metallic constituents semiconductor metal interfaces steels and steel related alloys and real catalysts Readers of this text will gain a good fundamental understanding and overview of surface interfacial and selvedge segregation Those who have an interest in physics vacuum science material science and chemical mechanical and electrical engineering will benefit from this imperative work

*Health Risks of Radon and Other Internally Deposited Alpha-Emitters* National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on the Biological Effects of Ionizing Radiations, 1988-02-01 This book describes hazards from radon progeny and other alpha emitters that humans may inhale or ingest from their environment In their analysis the authors summarize in one document clinical and epidemiological evidence the results of animal studies research on alpha particle damage at the cellular level metabolic pathways for internal alpha emitters dosimetry and microdosimetry of radionuclides deposited in specific tissues and the chemical toxicity of some low specific activity alpha emitters Techniques for estimating the risks to humans posed by radon and other internally deposited alpha emitters are offered along with a discussion of formulas models methods and the level of uncertainty inherent in the risk estimates

*Adaptive Computing in Design and Manufacture* V I.C. Parmee, 2012-12-06 The Adaptive Computing in Design and Manufacture Conference series is now in its tenth year and has become a well established application oriented meeting recognised by several UK Engineering Institutions and the International Society of Genetic and Evolutionary Computing The main theme of the conference again relates to the integration of evolutionary and adaptive computing technologies with design and manufacturing processes whilst also taking into account complementary advanced computing technologies Evolutionary and adaptive computing techniques continue to increase their penetration of industrial and commercial practice as their powerful search exploration and optimisation capabilities become ever more apparent The last two years have seen a very significant increase in the development of commercial software tools utilising adaptive computing technologies and the emergence of related commercial research and consultancy organisations supporting the introduction of best practice in terms of industrial utilisation Adaptive Computing in Design and Manufacture V is comprised of selected papers that cover a diverse set of industrial application areas including engineering design and design environments manufacturing process

design scheduling and control electronic circuit design fault detection Various aspects of search and optimisation such as multi objective and constrained optimisation are also investigated in the context of integration with industrial processes In addition to evolutionary computing techniques both neural net and agent based technologies play a role in a number of contributions This collection of papers will be of particular interest to both industrial researchers and practitioners in addition to the academic research communities of engineering operational research and computer science *Advances in Information and Intelligent Systems* Zbigniew W. Ras, William Ribarsky, 2009-10-15 The College of Computing and Informatics CCI at UNC Charlotte has three departments Computer Science Software and Information Systems and Bioinformatics and Genomics The Department of Computer Science offers study in a variety of specialized computing areas such as database design knowledge systems computer graphics artificial intelligence computer networks game design visualization computer vision and virtual reality The Department of Software and Information Systems is primarily focused on the study of technologies and methodologies for information system architecture design implementation integration and management with particular emphasis on system security The Department of Bioinformatics and Genomics focuses on the discovery development and application of novel computational technologies to help solve important biological problems This volume gives an overview of research done by CCI faculty in the area of Information Intelligent Systems Presented papers focus on recent advances in four major directions Complex Systems Knowledge Management Knowledge Discovery and Visualization A major reason for producing this book was to demonstrate a new important thrust in academic research where college wide interdisciplinary efforts are brought to bear on large general and important problems As shown in the research described here these efforts need not be formally organized joint undertakings through parts could be but are rather a convergence of interests around grand themes Quantitative Methods in Aquatic Ecotoxicology Michael C. Newman, 1994-12-21 This book provides a quantitative treatment of the science of ecotoxicology The first chapters consider fundamental concepts and definitions essential to understanding the fate and effects of toxicants at various levels of ecological organization as covered in the remaining chapters Scientific ecotoxicology and associated topics are defined The historical perspective rationale and characteristics are outlined for the strong inferential and quantitative approach advocated in this book The general measurement process is discussed and methodologies for defining and controlling variance which could otherwise exclude valid conclusions regarding ecotoxicological endeavors are considered Ecotoxicological concepts at increasing levels of ecological organization are discussed in the second part of the book Quantitative methods used to measure toxicant effects are outlined in this section The final chapter summarizes the book with a brief discussion of ecotoxicological assessment Numerous figures and tables accompany text with many statistical tables found in the appendix for quick reference Although the book primarily focuses on aquatic systems with appropriate modification the concepts and methods can be applied to terrestrial systems Nuclear Science Abstracts ,1972 Electron Microprobe Analysis and Scanning Electron Microscopy
