Sethi, Vasil Y. Hnatyshin, 2012-08-24 One of the first books to provide a comprehensive description of OPNET IT Guru and Modeler software The Practical OPNET User Guide for Computer Network Simulation explains how to use this software for simulating and modeling computer networks The included laboratory projects help readers learn different aspects of the software in a hands on way Quickly Locate Instructions for Performing a Task The book begins with a systematic introduction to the basic features of OPNET which are necessary for performing any network simulation The remainder of the text describes how to work with various protocol layers using a top down approach Every chapter explains the relevant OPNET features and includes step by step instructions on how to use the features during a network simulation Gain a Better Understanding of the Whats and Whys of the Simulations Each laboratory project in the back of the book presents a complete simulation and reflects the same progression of topics found in the main text The projects describe the overall goals of the experiment discuss the general network topology and give a high level description of the system configuration required to complete the simulation Discover the Complex Functionality Available in OPNET By providing an in depth look at the rich features of OPNET software this guide is an invaluable reference for IT professionals and researchers who need to create simulation models The book also helps newcomers understand OPNET by organizing the material in a logical manner that corresponds to the protocol layers in a network NS Simulator for Beginners Eitan Altman, Tania Jiménez, 2022-06-01 NS 2 is an open source discrete event network simulator which is widely used by both the research community as well as by the people involved in the standardization protocols of IETF The goal of this book is twofold on one hand to learn how to use the NS 2 simulator and on the other hand to become acquainted with and to understand the operation of some of the simulated objects using NS 2 simulations The book is intended to help students engineers or researchers who need not have much background in programming or who want to learn through simple examples how to analyse some simulated objects using NS 2 Simulations may differ from each other in many aspects the applications topologies parameters of network objects links nodes and protocols used etc The first chapter is a general introduction to the book where the importance of NS 2 as a tool

for a good comprehension of networks and protocols is stated In the next chapters we present special topics as TCP RED etc using NS 2 as a tool for better understanding the protocols We provide in the appendices a review of Random Variables and Confidence Intervals as well as a first sketch for using the new NS 3 simulator Table of Contents Introduction NS 2 Simulator Preliminaries How to work with trace files Description and simulation of TCP IP Routing and network dynamics RED Random Early Discard Differentiated Services Mobile Networks and Wireless Local Area Networks Classical queueing models Tcl and C linkage Recent Advances in Modeling and Simulation Tools for Communication Networks and Services Nejat

Innovative Control Systems for Tracked Vehicle Platforms Aleksander. M Nawrat. M,2014-02-13 This book has been motivated by an urgent need for designing and implementation of innovative control algorithms and systems for tracked vehicles Nowadays the unmanned vehicles are becoming more and more common Therefore there is a need for innovative mechanical constructions capable of adapting to various applications regardless the ground air or water underwater environment There are multiple various activities connected with tracked vehicles They can be distributed among three main groups design and control algorithms sensoric and vision based in formation construction and testing mechanical parts of unmanned vehicles Scientists and researchers involved in mechanics control algorithms image processing computer vision data fusion or IC will find this book useful

The Emerging Domain of Cooperating Objects Pedro José Marron,Stamatis Karnouskos,Daniel Minder,Aníbal Ollero,2011-01-19 There are a number of different system concepts that have gained much relevance in the area of embedded systems over the past couple of years First there is the classic concept of embedded systems where the focus is on control systems for physical processes Secondly the notion of pervasive computing has evolved where the vision foresees everyday objects having some form of computation capacity and in most cases sensing and communication facilities Thirdly the notion of wireless sensor networks has arisen where small computing devices are able to sense their environment and cooperate in order to achieve a well defined goal These three types of quite diverse systems share a lot of commonalities on the one hand and on the other hand have some complementary aspects in common that make a combination of these systems into a coherent system vision promising In particular the important notions of control heterogeneity wireless communication dynamic and ad hoc nature and cost are prevalent to various degrees in each of these systems A future system concept needs to combine the strong points of all three system concepts in at least these functional aspects It has to provide support for the control of physical processes like today s embedded systems do have as good support for device heterogeneity and spontaneity of usage as required by pervasive and ubiquitous computing approaches and has to be as cost efficient and wirelessly agile as wireless sensor networks are These new systems consist therefore of individual entities or objects that jointly strive to reach a common goal which will typically be a goal in sensing or control and are dynamically and loosely federating themselves for cooperation taking care not to overtax their available resources This book presents a roadmap to these concepts which are summarized as cooperating objects

Intelligence in Services and Networks. Paving the Way for an Open Service Market Han Zuidweg,Mario Campolargo,Jaime Delgado,Al Mullery,2008-01-03 Paving the Way for an Open Service Market We live in an age when powerful communications technology is becoming available to everyone From our home we can send and receive not only analogue voice but also growing volumes of digital information and even intelligence in the form of agents We are becoming

increasingly mobile and are expecting the same level of connectivity in the home in the office and on the road The regulatory and commercial environment in which we communicate is changing The telecommunications market is becoming increasingly competitive The Internet is erasing the borders between information technology and telecommunications And the way we do business is ever more dominated by electronic exchanges of information Is our technology ready for the open market of networks and services Can we manage the growing complexity of computing and telecommunications technology and place it at the service of the people The challenge for the research community is to develop the tools and techniques that will ultimately bring the full power of communications and information to everyone in a way that everyone can easily use The Sixth International Conference on Intelligence in Services and Networks IS N 99 is all about technology for paving the way to the open services market Since the first IS N conference in 1992 the focus of the IS N program has continually shifted We see existing technologies maturing while new ones emerge but the bottom line has always been putting technology at the service of the people
