

How Images Are Formed in Plane Mirrors

The rays show how light reaches your eyes. The dotted lines show where the light appears to come from.

Light reflects off you and strikes the mirror. The light then reflects off the mirror at an angle equal to the angle at which the light hit the mirror. Some of the reflected light enters your eyes.

Your image appears to be behind the mirror because your brain assumes that the light rays that enter your eyes travel in a straight line from an object to your eyes.
