Neuroinflammation and Behaviour Luba Sominsky, Adam K. Walker, Deborah M. Hodgson, 2015-07-21 The brain and immune system are involved in an intricate network of bidirectional communication

This relationship is vital for optimal physiological and psychological development and functioning but can also result in unwanted outcomes. In particular, this interaction plays an important role in cognition, mood, and behaviour. Neuroinflammation is known to contribute to neurological and affective disorders, including impaired learning and memory, depressive anxiety, and schizoaffective symptoms, as well as pain. The development of these conditions often occurs on the backdrop of pre-existing physical illnesses, which give rise to increased activation of the immune system, such as cancer, obesity, infection, and autoimmune disorders. Similarly, psychological states can alter regulation of the immune system. This has been most extensively studied in the context of stress and immune function. Understanding the underlying mechanisms that lead to the onset of inflammation-induced neuropathology and stress-induced immune suppression will contribute to the development of novel and effective treatment strategies for both the disease and its neurological side effects. In this research topic, we explored the relationship between the immune system and the brain throughout life. We include both original research and review papers from animal, clinical, and molecular perspectives.

Adapt and Be Adept Terry L. Anderson, 2021-04-01 How can markets help us adapt to the challenges of climate change Editor Terry L Anderson brings together this collection of essays featuring the work of nine leading policy analysts who argue that market forces are just as important as government regulation in shaping climate policy and should be at the heart of our response to helping societies adapt to climate change Anderson notes in his introduction that most current climate policies such as the Paris Agreement require hard to enforce collective action and focus on reducing or mitigating greenhouse gases rather than adapting to their negative effects Adaptive actions can typically deliver much more faster and more cheaply than any realistic climate policy The authors tackle a range of issues the hidden costs of renewable energy sources the political obstacles surrounding climate change policy insurance and financial instruments for pricing risk of exposure to the effects of climate change and more Reliance on emerging renewable energies and a carbon tax are not enough to prevent the effects of global warming they argue We must encourage more private action and market incentives to adapt to a rapidly changing climate
