Reshore Production Now William A. Levinson, 2023-06-08 This book addresses the vital importance of reshoring US manufacturing capability to ensure economic and military security and then discusses the proven methods that the United States used to gain manufacturing supremacy in the first place The vital takeaway is If the job can be made sufficiently productive the per unit labor cost ceases to be relevant which means a business can pay high wages realize high profits and deliver low prices simultaneously The contest is then not between high wages and cheap labor but between efficiency and inefficiency and when automation is involved machine against machine Readers will be able to put these principles to work very quickly to achieve tangible results The relatively low Federal minimum wage has meanwhile become a major issue but inflation skyrocketed in the second quarter of 2022 when higher wages and higher demand for goods and services were not matched with higher productivity The book addresses the relationship between the money supply and the velocity of money to prices wages and productivity A manufacturing resurgence in the United States will not only increase our standard of living enormously but generate taxable economic activity that will help pay down rather than increase the Federal debt Higher productivity also delivers a greater supply of goods to accompany higher wages and thus works against inflation This can prevent looming recessions and disruptions

Grit and Gold Gayatri Chandrashekar, 2015-08-21 India is estimated to have 9% of the global gold reserves spread over 100 places across its land mass Southern Indias Deccan region has indeed been identified as one of the areas with the richest deposits and this has been proved by the documented history of past mining here Mining activities can contribute greatly to the growth of the industrial sector but India is yet to realise the mining fuelled growth Mining contributes no more than 2 5% to the nations GDP and employment to just 700 000 people Australia has seen its gold production increase manifold in the 20 years from 1980 with the infusion of latest technology and high risk capital On the other hand procedural delays and varied and different license requirements for prospecting and mining the lack of technology and sufficient venture funds have slowed down the growth of mining in India The ecological and social impact of mining can be devastating on forests and wild life and burden the weaker sections of society with loss of livelihood and way of life However unlike coal iron or manganese which lie buried under precious forests in many parts of India gold seems to occur in areas less vulnerable to damage While India mines many metals only to satisfy its own domestic needs the consumption of gold is enormous at 880 tonnes or more per annum while production is only about 2 to 3 5 tonnes Indeed the appetite for gold is insatiable and growing The country barely produces 0 4 percent of its gold consumption It is a good time to look at how a British company ran a successful and profitable mining enterprise in India for 76 years and created standards and pioneering technologies for deep mining for the world
