

famous, and unusually even, broad dispersion promotes superbly true-to-life "soundstaging."

The GT1 and GB1 feature 6.5" woofers (two on the GT1 and one on the GB1) while the GC1 uses two 5.25" woofers. For use in home theater applications all models have been video shielded. The woven fiberglass woofers are engineered for dynamic range, controlled expression, and exceptionally linear high-output reproduction. Together, these superb transducers enable the G-Design models' smooth, accurate reproduction and remarkable dynamic potential. Combining this with our never ending quality control – we compare each speaker to its reference standard, a much over-looked but crucial factor – to yield consistently matched speakers. This, in turn, produces the PSB G-Designs' wonderfully natural, stable and precise spatial qualities.

The same characteristics that make the G-Design GT1 and GB1 excellent stereo speakers make them superb anchors for a multi-channel home-

theater system: exceptionally accurate tonality, tremendous dynamic range, superb clarity and detail. But truly excellent multi-channel sound demands companion speakers of equal quality, meticulously "timbre-matched" to preserve the consistent tonality and dimensionality so critical to convincing surround-sound reproduction. This is achieved with the G-Design GC1 center-channel speaker. The GC1 delivers the high efficiency and wide dynamic range required by a center channel in a home-theater system. Its complex drivers-cabinet-crossover system is extensively fine-tuned for accurate timbral-matching to the GT1 and GB1. Less obvious but just as important, Barton was equally careful to ensure complementary dispersion and spatial response for seamless "front-stage" imaging. Experience your favorite music and film soundtracks in all their glory on the PSB G-Design models to understand how PSB has taken performance to new heights of excellence.
