

## Psych Exam 1 Study Guide

### What is psychology?

- **Psychology**- a science that seeks answers to age-old questions about why people think, feel, and act as they do, aiming to separate uninformed opinions from examined conclusions.

### Applied vs Basic Research

- **Basic**: understand process and reasons/attempt to answer questions about behavior
- **Applied**: conducted to address practical problems/ useful solutions within a few years

**"CAN'T HAVE APPLIED RESEARCH IF YOU DON'T HAVE BASIC"**

### Scientific Methods and Research Designs:

**Case Study**: a descriptive research technique in which one individual or group is studied in depth in the hope of revealing universal principles; describes behavior

**Correlational**: indicates how closely two things vary together, and thus how well either one predicts the other

- A **positive correlation** (above 0 to +1.00) indicates a **direct relationship**, meaning that two things increase together or decrease together. For example, height and weight are **positively correlated**.
- A **negative correlation** (below 0 to -1.00) indicates an **inverse relationship**: As one thing increases, the other decreases. The weekly number of hours spent in TV watching and video gaming correlates negatively with grades.

**Experimental**: powerful form of investigation that allows researchers to draw conclusions about **cause and effect relationships** between different factors; independent variable, dependent variable, controlled and cause and effect relationships

**Naturalistic Observation**: observing and recording behavior in naturally occurring situations without trying to manipulate and control the situation; describes behaviors with no explanation

**Survey**: self-reports in which people answer questions about their behavior or attitudes

**Theory**: help us explain and predict behavior by offering ideas that organize what we have observed

- Tentative explanation
- A whole body of research
